DEDICATED EMPLOYEES

Headquartered in Fagersta, Sweden and present in more than 75 countries, Seco Tools is a leading global provider of metal cutting solutions for milling, stationary tools, holemaking and tooling systems.

For more than 80 years, the company has provided the technologies, processes and support that manufacturers depend on for maximum productivity and profitability. For more information on how Seco's innovative products and expert services bring success to manufacturers across all industry segments, please visit www.secotools.com.

At Seco we make every effort to give you the best in drilling, reaming, threading and boring. Our comprehensive range of holemaking tools are second-to-none.

We have years of experience of 'challenging' holemaking applications. Our R&D and metal cutting expertise consistently yields new and more productive solutions. But most importantly, we pride ourselves on offering the highest service level, and on being engaged in making our customers as cost-effective and competitive as possible.

Seco Tools will take responsibility and assist in all areas to create the hole, including technical troubleshooting.

We supply complete holemaking know-how, including drilling, reaming, threading and boring – finding ways and processes making you more competitive. And we offer great simplicity by streamlining administration, support and service through one contact. The result?

You don't need to worry about holemaking we take care of the complete process.

As a Seco customer, you are offered:

- One stop shopping of high quality metal cutting tools, solutions and services
- Simplicity of contacts, purchasing, stock, technical support, consultancy and process solutions
- A range of high performance holemaking tools covering drilling, reaming, threading and boring
- One supplier responsible for the quality of the finished hole - or even for the complete machining of the finished part
- Complete holemaking know-how, including drilling, reaming, threading and boring
- Greatly increased process security with close cooperation together with one knowledgeable supplier
- The highest tool quality offering great productivity and cost reduction opportunities

What are you looking for in making a hole?

Positioning accuracy

Seco Feedmax, A750 rough boring heads and the whole range of fine boring heads are the holemaking tools that offer the best positioning accuracy.

Hole geometry

For excellent hole geometry, such as as roundness and straightness, all of Seco's drilling, boring and reaming tools offer the same high and consistent quality. Seco's boring heads will always guarantee the best results on straightness.

Surface finish

For a really smooth hole surface Bifix/Precifix is your first choice, and Seco's fine boring heads offer a full range of machining capabilities.

TCTR = Thread Tolerance Class

Seco Feedmax, Crownloc and Performax are used to drill holes from 0,1 to 160 mm in diameter, with tolerances from IT8 to IT12.

For already cast holes, rough boring or semi-finishing is often used, with Bridge Bars and Jumbo Bridge Bars used for the large diameters.

Finally, high quality holes are made with reaming and fine boring heads, reaching tolerances of IT5 or IT6.

* Rough IT9/10, ** Fine IT 5/6

Threadmaster DTM, TM, TM2, 396.18 and 396.19; The same cutter could be used for machining right and left hand threads. Metric and UN versions are only for internal threading. It's also possible to make all types of tolerances with the same cutter.

Threadmaster Tap: Available in the most popular threads and tolerances in both cutting and forming taps.

Drilling at Seco

- Seco can offer one stop shopping of high quality drills, solutions and services
- We have years of experience in 'challenging' drill applications
- Seco has a full range of drill products that fits all applications and materials in all industry segments, like Automotive, Aerospace, Energy, Medical etc.
- The wide diameter range of Seco drills from 0,1 – 160 mm with the Feedmax™ (solid carbide drills), Crownloc® (exchangeable tip drills) and Perfomax® (Indexable drills), covers the most common thread sizes in the market
- More information about the drill products can be found at, www.secotools.com

Threading at Seco

- Seco can now offer all types of threading methods
- For many years Seco have been the market leader in thread turning with the well known Snap-Tap® products
- During the last ten years Seco has been established as a leading supplier of tools for thread milling, with the solid Threadmaster™ and Drilling Threadmaster as well as 396.19 with indexable carbide inserts
- Seco is also supplier of chasers for the Oil & Gas industry
- Seco is also supplying threading taps which makes Seco's product offering for threading tools complete
- All threading products are supported by the 'Threading Wizard' machining guidance software, available from www.secotools.com

Thread tapping

- Available as both cutting and forming taps
- An easy, well known and productive threading process
- Can be used for both rotating and non-rotating applications
- Good chip control
- Easy to thread in deep holes

Drilling range – Choice of drill

Seco Feedmax™ Solid carbide drills

PRODUCTIVITY

- High feeds and cutting speeds
- Close tolerance holes
- For applications with high stability
- For all workpiece materials

Crownloc® & Crownloc®Plus Exchangeable crown drills

FLEXIBILITY

- Exchangeable carbide tips
- Geometries for different workpiece materials
- No regrinding
- Several tip diameters for each drill body

Perfomax® Indexable insert drills

COST EFFECTIVENESS

- Grades and geometries for all workpiece materials
- Square inserts for low cost/hole
- Drilling, plunging, crossing holes with angled entrance or exit, boring, etc.
- High application security

SMG – Introduction

The foundation for SMG is a classification of workpiece materials based on their type rather than their relative machinability and consequently it contains workpiece materials like composites. It is comprehensive enough, but still easy to identify to which SMG a particular material belongs. Each SMG has a specific material standard in a specific condition assigned as reference to allow easy adjustment of cutting data for any actual material compared to any Seco reference material see pages 490 - 493.

As example the reference materials EN C45E for SMG P4 and EN 42 CrMo 4 for both SMG P5 and SMG H5 see further details in the following tables.

In SMG classification of workpiece materials involves a specific material standard in a specific condition assigned as reference for easy and unambiguous adjustment of cutting data for any actual material compared to any Seco reference material. As examples the reference materials EN C45E for SMG P4 and EN 42 CrMo 4 for both SMG P5 and SMG H5 shown below in table 1 where the reference level material property is indicated.

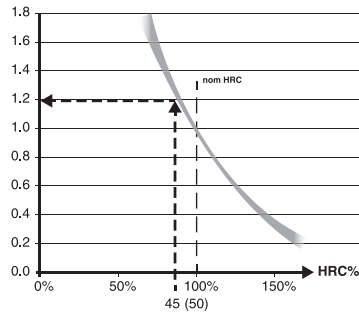

SMG	Description	Properties	Reference	SMG	Description	Properties	Reference
P4	Low-alloy general structural steels, 0.25% < C < 0.67%wt Low-alloy Quench & Temper steels	520 < R _m < 1200	C 45E R _m = 660 N/mm ²	H5	Quenched & Tempered steels	38 < HRC < 56	42 CrMo 4 50 HRC
P5	Structural steels, 0.25% < C < 0.67%wt Quench & Temper steels	550 < R _m < 1200	42 CrMo 4 R _m = 700 N/mm ²				

Focusing specifically on EN 42 CrMo 4 in annealed condition, the ultimate tensile strength R_m may typically vary between R_m = 630 N/mm² and R_m = 780 N/mm², which provide a reference level for SMG P5. In Quenched & Tempered condition, the ultimate tensile strength R_m may typically be between R_m = 900 N/mm² and R_m = 1100 N/mm² thus still belongs to SMG P5. However, if hardened above R_m = 1200 N/mm² it now belongs to SMG H5.

SMG	EN	W.-Nr	AFNOR	BS	UNI	JIS	AISI / ASTM	GOST	Condition	R _{m, nom}	HRC _{nom}
P5	42 CrMo 4	1.1201	42 CD 4	708 M 40	42 CrMo 4	SCM 440 (H)	4142, 4140	38HM	Annealed	700	
	42 CrMo 4	1.1201	42 CD 4	708 M 40	42 CrMo 4	SCM 440 (H)	4142, 4140	38HM	Quenched & Tempered	1000	
H5	42 CrMo 4	1.1201	42 CD 4	708 M 40	42 CrMo 4	SCM 440 (H)	4142, 4140	38HM	Quenched & Tempered		45
	42 CrMo 4	1.1201	42 CD 4	708 M 40	42 CrMo 4	SCM 440 (H)	4142, 4140	38HM	Quenched & Tempered		50

The EN 42CrMo4 quench & tempered steel could be used to illustrate the machinability dependence of materials' condition.

The graphs below indicate how speed recommendations for a nominal material conditions may be adjusted for relative R_m (left diagram valid for ISO-P) and for relative HRC (valid for ISO-H).

To further illustrate how the SMG P5 nominal v_c can be adjusted to a more accurate recommended v_c we need ultimate tensile strength R_m data and in this case we use the EN 42 CrMo 4 quenched & tempered to R_m = 1000 N/mm² according to above table (bold blue arrows).

Assume that we find that the SMG P5 nominal v_c = 280 m/min for a certain product and machining.

Then, actual recommended v_c = 280 m/min × 0,75 = 210 m/min.

Consequently in the SMG H5 the nominal v_c can be adjusted using the hardened EN 42 CrMo 4 at HRC 45 (smaller grey arrows).

Assume that the SMG H5 nominal v_c = 50 m/min for a certain product and machining using a coated cemented carbide tool then, actual recommended v_c = 50 m/min × 1,2 = 60 m/min.

For further workpiece material details please see page(s) 494-501 and suggested cutting data at applicable pages.

For more convenient cutting data handling we recommend applicable tools in My Pages – Suggest on www.secotools.com

ISO attribute	Explanation
ADJLN	Minimum adjustment limit
ADJLX	Maximum adjustment limit
ADJRG	Adjustment range
AN	Clearance angle major
APMX	Depth of cut maximum
AZ	Maximum plunge depth
B	Shank width

M	M-dimension
OAL	Overall length
RE	Corner radius
S	Insert thickness
TDZ	Thread diameter size
WB	Body width
WF	Functional width

For high performance machining

High performance and Universal solutions What are you looking for in your solid drill application?

Seco Universal – Versatile general performance solid carbide drill

Seco Universal is a multi purpose general performance solid carbide drill, that can be used in a wide range of materials and applications in all industry segments. Thanks to the design with a strong self centering 140 degree drill point, polished chip flutes and the excellent quality of the drill - high capacity utilization, application security and versatility is provided at a very low cost.

With Seco Universal stock holding cost can be reduced and greater machining flexibility is offered, leading to reduced set-up time.

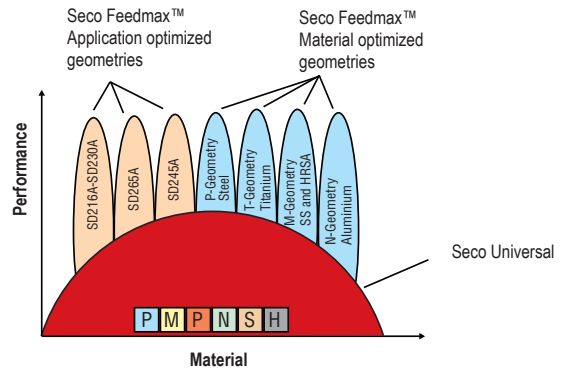

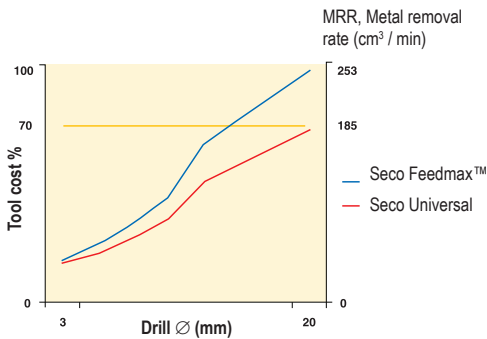

Seco Universal is an alternative to Seco Feedmax in operations when versatility, flexibility and reduced stock holding cost are the main targets.

Seco Feedmax™ – Productive high performance solid carbide drill

Seco Feedmax™ offers a unique combination of state-of-the-art carbide, coating- and geometry technology.

Seco Feedmax™ is designed for high productivity and low cost per hole with high feeds up to 0,70 mm/rev and high cutting speeds up to 220 m/min. With excellent centering capabilities - high hole quality is achieved with no need for centre drilling operations. Thanks to the modern coating with high hot hardness, the strong cutting edges with protective corner chamfers, high strength carbide rod, excellent chip evacuation capabilities and a superb cutting edge quality - a long and predictable tool life is achieved.

Seco Feedmax™ has a wide range of optimized geometries for different materials and applications, to obtain a good quality hole at the lowest cost.

Tool life, lower cutting data

First hole is set as reference, 100% based on the spindle power Cutting data

$v_c = 90\text{m/min}$

$f = 0,15\text{ mm/rev}$

Material =SMG P5-P6, SS2244, DIN41CrMo4, AISI 4140

Tool life, high cutting data

First hole is set as reference, 100% based on the spindle power Cutting data

$V_c = 160\text{ m/min}$

$f = 0,24\text{ mm/rev}$

Material =SMG P5-P6, SS2244, DIN41CrMo4, AISI 4140

Range overview

Seco Feedmax™	∅ Range	Drill depth	Drill ∅ tolerance	Hole tolerance (1)	Surface finish (2)
SD1103, SD1103A Universal  Page(s) 27-34	3-20 mm	~ 3 x D	m7	IT 8-9	R _a 1-2 μm
SD1105A Universal  Page(s) 35-39	3-20 mm	~ 5 x D	m7	IT 8-9	R _a 1-2 μm

SD26: ~6 x D

M - Geometry for superalloys
T - Geometry for titanium alloys
N - Geometry for aluminium
C1 - Geometry for CFRP and exiting in CFRP
C2 - Geometry for CFRP and exiting in i.e. Ti or Al
CX1/CX2/CX3 - PCD drills for CFRP and GFRP

Set up

Holding/run-out

Drills with cylindrical shanks can be used with Shrinkfit holder, hydraulic chucks or collet chucks.

Keep the total indicated run-out of the drill within 0,04 mm measured in the spindle.

For best result keep run-out 0,02 mm.

Stability

The stability of the application is important to obtain the best tool life and hole accuracy. Check the condition of the machine spindle, fixture and fixturing of the component to secure maximum stability and rigidity. Unstable conditions can cause tool breakages.

Tool life

Drills should not be used with flank wear exceeding 0,1–0,3 mm measured at the largest point.

Recommended tool holders

For best result use holders:

Type 5603 - Shrinkfit holders, DIN type

Type 5834 - Hydraulic chucks

Type 5672 - High precision collet chucks

For more information see Tooling Systems catalogue

Shrinkfit holder

(For cylindrical, R1 shanks only)

Hydraulic chuck

(For cylindrical, -R1 shanks only)

High precision collet chucks

(For cylindrical, R1 shanks only)

Machining methods

Hole entrance on a machined surface

No pre-drilling or entrance feed needed.

When using a longer drill it's recommended to drill a pilot hole.

Angled hole exits

Before hole exit reduce the feed/rev by 50%.

Or use SD245A drills.

Irregular/angled hole entrance

If irregular or angle entrance use pre operations accordingly

Pre drill with a short standard Feedmax

Irregular hole entrance

Pre-machining alternatives

Angled hole entrance

Machine a flat using an end mill from the Seco range

Coolant recommendations

Coolant pressure*

Minimum recommended coolant pressure 10 bar with $\leq 5 \times D$

Minimum recommended coolant pressure 30 bar with $> 5 \times D$

Minimum recommended coolant pressure 40 bar with $> 16 \times D$

Coolant mix

Recommended emulsion mix 6-8%. When drilling in stainless steels, superalloys and high strength steels a mix of 10% is recommended.

First choice

$\leq 5 \times D$

* If lower coolant pressure is used adjust by reducing cutting data accordingly.

Machining methods - SD216A (16 x D) up to SD230A (30 x D)

Step by step

1. Drill a pilot hole 2-3 x D. Use a standard drill with the same diameter i.e. SD203A or SD1103 (with 140° point angle).

2. Enter the hole with the machine spindle stopped or use a low rpm (500). Stop 2 mm above the pilot hole depth.

3. Start the machine spindle and the coolant, drill with the recommended cutting data. (No peck drilling).

4. When reaching full depth, reduce the rpm to 500 and then retract the drill with 4 times the work feed to avoid retraction marks.

Machining methods – Micro drills

Pilot hole

SD22

SD26

For optimal hole tolerance and positioning accuracy use an SD22 pilot drill of the same diameter.
Below 1 mm diameter drill we highly recommend to use a pilot drill.

Pecking

For long chipping materials a pecking cycle should be used.
Generally peck every 1 x D drilling depth.

Drilling depth ~ 3 x D

Cylindrical shank DIN 6537A

For intermediate diameters see the MyDesign software.

Drilling depth ~ 5 x D – Metric

Cylindrical shank DIN 6537A

- Internal coolant
- Point angle: 140°
- Coating: TiAlN
- Hole tolerance: IT8-9
- For cutting and machining data see page(s) 104-105

To be used with cylindrical shank only (R1).

Maximum chamfer depth

For difficult machining materials

Drilling depth ~ 3 x D

Cylindrical shank DIN 6537A

- Internal coolant
- Point angle: 140°
- Coating: TiAlN + TiN
- Hole tolerance: IT8-9
- For cutting data see page(s) 102-103

Composite machining

When hole quality is in focus

With issues like entrance and exit delamination and splintering, the focus has been clear; design tools specifically optimized for composite applications, and tools specifically optimised for sandwich materials. In both cases particular consideration was given to achieving excellent performance in both entering and exiting. (In sandwich material this usually involves exiting in either Al or Ti).

- No push-up delamination (entrance)
- No pull-down delamination (exit)

The Dura diamond coating secures good dimensional tolerance throughout the long tool life.

Application example

Plain CFRP/GFRP (exit in composite material)

CX1 geometry

Sandwich material (exit in Al/Ti)

CX2 geometry

CX31 geometry PCD
Universal geometry for both
Plain CFRP/GFRP and
Sandwich materials

Troubleshooting

Hole exit

Problem:	Delamination (peel up / push down)	Spalling	Uncut fibres	Uncut resin
Solution:	Peel up <ul style="list-style-type: none"> • Use tool with more negative geometry • Reduce feed/rev. 	<ul style="list-style-type: none"> • Use tool with more positive geometry • Reduce feed/rev. 	<ul style="list-style-type: none"> • Use tool with a sharper geometry • Reduce feed/rev. 	<ul style="list-style-type: none"> • Use tool with a sharper geometry • Reduce feed/rev. • Reduce cutting speed
	Push down <ul style="list-style-type: none"> • Reduce feed/rev. 			
Problem:	Melted resin Too much heat	Poor tool life		
Solution:	<ul style="list-style-type: none"> • Reduce cutting speed 	<ul style="list-style-type: none"> • Reduce cutting speed

Custom design – No waiting for quotations! Price and delivery time available instantly!

A well defined strategy has been created for the total process for custom-made drills from quotation to finished drill. You can now design your own customised Seco Feedmax™ drill using the Custom Design software.

The concept gives you a number of advantages:

- No waiting for quotations! price and delivery time available instantly
- Directly visualises your needs. No risk of misunderstandings
- Short delivery time

CUSTOM DESIGN

Different types of custom drills – Detailed information can be found in the Custom Design software

A1. Single diameter

A2. Reinforced

A3. Chamfer

B1. Counterbore

B2. Counterbore and chamfer

B3. Step

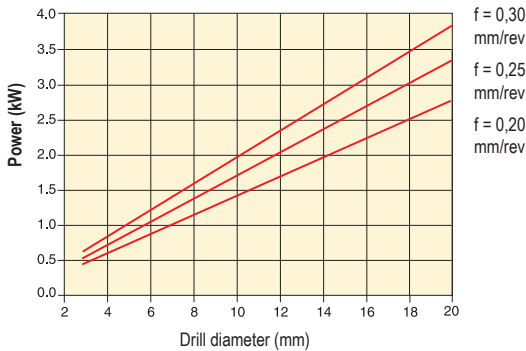

B4. Step and chamfer

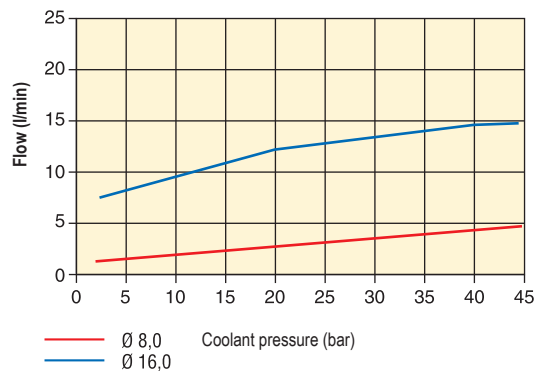

Machining data

Net power consumption

Coolant flow at different pressures

Feed force

Method

Adjust feed up or down to obtain as good chip formation as possible. Increased feed/rev. gives shorter chips.

The values showing feed force and net power consumption above are basic values and vary with type of cutting data, material and tool wear.

Machining data

SD1103, SD1103A, SD1105A, SD203, SD203A, SD205A, SD206, SD206A, SD207A, SD216A, SD230A IT8-9/Ra 1-3*		
Drill Ø DC (mm)	IT9 tolerance (µm)	IT10 tolerance (µm)
<3	14	25
3-6	18	30
6-10	22	36
10-18	27	43
> 18	33	52

*Deterioration of surface finish can occur when drilling in low carbon steel or stainless steel.

Troubleshooting – Initial check points:

- Fixturing stability
- Machine spindle condition
- Tool holder condition
- Clamping of tool:
 - Run-out within 0,04 TIR
 - If using pre drilling within 0,04 TIR
- Chip evacuation:
 - Cutting data
- Coolant:
 - Pressure
 - Flow
 - Concentration

<p>Rapid flank wear</p> <ul style="list-style-type: none"> • Reduce the cutting speed • Increase coolant concentration 	<p>Unsatisfactory diameter tolerance</p> <ul style="list-style-type: none"> • Increase the feed/rev • Use a remaining operation, see page 231 • Use a boring operation, see page 387-388 
<p>Wear/Periphery land</p> <ul style="list-style-type: none"> • Reduce the cutting speed • Increase coolant concentration 	<p>Unsatisfactory positioning of the hole</p> <ul style="list-style-type: none"> • Reduce feed/rev. on entrance • Reduce feed/rev • Use a boring operation, see pages 387-388 • If drilling through rough, hard and angled surfaces - reduce the feed by 30%-50% during entrance and exit • Centre drill with a 140° point angle 
<p>Chipping/Centre</p> <ul style="list-style-type: none"> • Reduce feed during entrance • Increase coolant pressure and adjust the feed to optimize the chip formation 	<p>Unsatisfactory surface finish-Feedmax</p> <ul style="list-style-type: none"> • Reduce the feed/rev • Increase the cutting speed • Use a remaining operation, see page 231 
<p>Chipping/Outer corner, cutting edge</p> <ul style="list-style-type: none"> • Reduce feed during entrance/exit • Reduce the cutting speed • Increase coolant concentration • Regrind the drill 	<p>Burrs on exit</p> <ul style="list-style-type: none"> • Reduce the feed/rev. on exit • Reduce the width of edge preparation (BN) 
<p>Built-up edge</p> <ul style="list-style-type: none"> • If closer to the periphery increase the cutting speed • If closer to centre increase feed/rev • If the drill is worn, regrind it 	<p>Breakage on contact/at hole bottom</p> <ul style="list-style-type: none"> • Reduce the feed/rev. during entrance/exit • Adjust cutting data for improved chip evacuation 

Regrinding instructions for SD1103, SD1103A and SD1105A

1. Four facet point

Lip height distance (axial run-out) to be within 0,02 mm

2. Web thinning

Drill Ø DC (mm)	L (mm)
2-10	0,1-0,3
10-20	0,2-0,4

3. Grinding of flat X

X = 0,08 x drill diameter DC

4. Edge preparation

Workpiece material	BN (mm)	
	Drill Ø ≤10 (mm)	Drill Ø >10 (mm)
Steel	0,05	0,10
Stainless steel	0,05	0,05
Cast iron	0,05	0,10

Max. allowed flank wear before regrinding is 0,1-0,3 mm measured at the largest point.

Specifications

Proposed specification of diamond wheels:

- Conical clearance: Wheel shape 12A2 Grit size D54 (picture 1).
- Gashing: Wheel shape 1A1 or 1V1 Grit size D64-D46 (picture 2-3).
- Corner chamfer: Wheel shape 1A1 or 12A2 (picture 1).
- Edge treatment: grinding K-land or brushing (picture 4).

Important:

- The cutting edges must be uniform and have the same size of edge preparation.
- The edge preparation must be applied on the whole length of the cutting edges.

Regrinding instructions for SD203A, SD205A and SD207A -P geometry

1. Conical flank

Lip height distance (axial run-out) to be within 0,02 mm

2. Web thinning

Drill Ø DC (mm)	L (mm)
2-10	0,1-0,3
10-20	0,2-0,4

3. Grinding of flat X

$X = 0,08 \times \text{drill diameter DC}$

4. Edge preparation

Workpiece material	BN (mm)	
	Drill Ø ≤10 (mm)	Drill Ø >10 (mm)
Steel	0,05	0,10
Stainless steel	0,05	0,05
Cast iron	0,05	0,10

Max. allowed flank wear before regrinding is 0,1–0,3 mm measured at the largest point.

Specifications

Proposed specification of diamond wheels:

- Conical clearance: Wheel shape 12A2 Grit size D54 (picture 1).
- Gashing: Wheel shape 1A1 or 1V1 Grit size D64-D46 (picture 2-3).
- Corner chamfer: Wheel shape 1A1 or 12A2 (picture 1).
- Edge treatment: grinding K-land or brushing (picture 4).

Important:

- The cutting edges must be uniform and have the same size of edge preparation.
- The edge preparation must be applied on the whole length of the cutting edges.

Regrinding instructions for SD203A, SD205A and SD207A

1. Conical flank

Lip height distance (axial run-out) to be within 0,02 mm

2. Web thinning

Drill Ø DC (mm)	L (mm)
2-10	0,1-0,3
10-20	0,2-0,4

3. Grinding of flat X

$X = 0,08 \times \text{drill diameter DC}$

4. Edge preparation

Workpiece material	BN (mm)	
	Drill Ø ≤10 (mm)	Drill Ø >10 (mm)
Steel	0,05	0,10
Stainless steel	0,05	0,05
Cast iron	0,05	0,10

Max. allowed flank wear before regrinding is 0,1–0,3 mm measured at the largest point.

Specifications

Proposed specification of diamond wheels:

Conical clearance: Wheel shape 12A2 Grit size D54 (picture 1).

Gashing: Wheel shape 1A1 or 1V1 Grit size D64-D46 (picture 2-3).

Corner chamfer: Wheel shape 1A1 or 12A2 (picture 1).

Edge treatment: grinding K-land or brushing (picture 4).

Important:

- The cutting edges must be uniform and have the same size of edge preparation.
- The edge preparation must be applied on the whole length of the cutting edges.

Regrinding instructions for chamfer drills

The regrinding instructions are the same as for SD203, SD203A, SD205A and SD207A except for the chamfer.

1. Chamfer relief

2. Edge preparation, chamfer

Workpiece material	BN (mm)	
	Drill $\varnothing \leq 10$ (mm)	Drill $\varnothing > 10$ (mm)
Steel	0,05	0,05
Stainless steel	0,05	0,05
Cast iron	0,05	0,05

Regrinding instructions for SD212A, SD216A, SD220A, SD225A and SD230A geometry

1. Conical flank

Lip height distance (axial run-out) to be within 0,02 mm

2. Web thinning

Drill Ø DC (mm)	L (mm)
2-10	0,2
10-20	0,4

3. Grinding of flat X

$X = 0,08 \times \text{drill diameter DC}$

4. Edge preparation

Workpiece material	BN (mm)	
	Drill Ø ≤10 (mm)	Drill Ø >10 (mm)
Steel	0,05	0,1
Stainless steel	0,05	0,05
Cast iron	0,05	0,1

Max. allowed flank wear before regrinding is 0,1–0,3 mm measured at the largest point.

Specifications

Proposed specification of diamond wheels:

Point relief: wheel shape 11V9 grit size D54 (picture 1).

Gashing: Wheel shape 1A1 or 1V1 Grit size D64-D46 (picture 2-3).

Corner chamfer: Wheel shape 1A1 or 12A2 (picture 1).

Edge treatment: grinding K-land or brushing (picture 4).

Important:

- The cutting edges must be uniform and have the same size of edge preparation.
- The edge preparation must be applied on the whole length of the cutting edges.

Regrinding instructions for SD265A

1. Conical flank

Lip height distance (axial run-out) to be within 0,02 mm

2. Web thinning

Drill \varnothing DC (mm)	L (mm)
2-10	0,1-0,3
10-20	0,2-0,4

3. Grinding of flat X

4. Edge preparation

Workpiece material	Drill \varnothing \leq 10 (mm)	Drill \varnothing $>$ 10 (mm)
Steel	0,05	0,10
Stainless steel	0,05	0,05
Cast iron	0,05	0,10

Max. allowed flank wear before regrinding is 0,1–0,3 mm measured at the largest point.

Specifications

Proposed specification of diamond wheels:

Conical clearance: Wheel shape 12A2 Grit size D54 (picture 1).

Gashing: Wheel shape 1A1 or 1V1 Grit size D64-D46 (picture 2-3).

Corner chamfer: Wheel shape 1A1 or 12A2 (picture 1).

Edge treatment: grinding K-land or brushing (picture 4).

Important:

- The cutting edges must be uniform and have the same size of edge preparation.
- The edge preparation must be applied on the whole length of the cutting edges.

Regrinding instructions for -M and -T geometry

1. Conical flank

Lip height distance (axial run-out) to be within 0,01 mm

2. Web thinning

Chisel edge length L

Drill Ø DC (mm)	L (mm)
3-6	0,1-0,2
6-10	0,13-0,27
10-20	0,2-0,4

3. Grinding of flat X

4. Edge preparation

BN = 0,02

Max. allowed flank wear before regrinding is 0,1–0,3 mm measured at the largest point.

Specifications

Proposed specification of diamond wheels:

Conical clearance: Wheel shape 12A2 Grit size D54 (picture 1).

Gashing: Wheel shape 1A1 or 1V1 Grit size D64-D46 (picture 2-3).

Corner chamfer: Wheel shape 1A1 or 12A2 (picture 1).

Edge treatment: grinding K-land or brushing (picture 4).

Important:

- The cutting edges must be uniform and have the same size of edge preparation.
- The edge preparation must be applied on the whole length of the cutting edges.

Regrinding instructions for -N geometry

1. Conical flank

Lip height distance (axial run-out) to be within 0,01 mm

2. Web thinning

Chisel edge length L

Drill Ø DC (mm)	L (mm)
3-6	0,1-0,2
6-10	0,13-0,27
10-20	0,2-0,4

3. Grinding of flat X

Max. allowed flank wear before regrinding is 0,1–0,3 mm measured at the largest point.

General:

X = 0,08 x drill diameter DC

Specifications

Proposed specification of diamond wheels:

Conical clearance: Wheel shape 12A2 Grit size D54 (picture 1).

Gashing: Wheel shape 1A1 or 1V1 Grit size D64-D46 (picture 2-3).

Corner chamfer: Wheel shape 1A1 or 12A2 (picture 1).

Edge treatment: grinding K-land or brushing (picture 4).

Important:

- The cutting edges must be uniform and have the same size of edge preparation.
- The edge preparation must be applied on the whole length of the cutting edges.

4. Edge preparation

BN = 0,01-0,02

Range overview

Crownloc®	∅ Range	Drill depth	Crown tolerance	Hole tolerance (1)	Surface finish (2)
<p>SD101</p>  <p>Page(s) 110</p>	12,00–25,99 mm	~ 1,5 x D	k7	IT10	R _a 1–3 μm
<p>SD103</p>  <p>Page(s) 111</p>	10,00–25,99 mm	~ 3 x D	k7	IT10	R _a 1–3 μm
<p>SD105</p>  <p>Page(s) 112</p>	10,00–25,99 mm	~ 5 x D	k7	IT10	R _a 1–3 μm
<p>SD107</p>  <p>Page(s) 113</p>	12,00–25,99 mm	~ 7 x D	k7	IT10	R _a 1–4 μm
<p>Chamfer module</p>  <p>Page(s) 117</p>	12,00–19,99 mm	–	–	–	–

1) Variations can occur depending on the material and the cutting data used.

2) Drill depth, cutting data, coolant pressure and material can cause deterioration of the surface finish.

Code key Crownloc®

Code key Crowns

Geometries

<p>P-geometry - Universal geometry, first choice for drilling in steel</p> 	<p>M-geometry - For stainless steels and high temp alloys</p> 	<p>K-geometry - First choice for drilling in cast iron</p> 
---	--	--

Mounting instructions

1. Clean the locking interface of the drill body carefully to remove any chips or debris.
2. Make sure that the pull rod is fully extended.
3. Mount new crown onto the pull rod and turn it until it reaches the bottom of the thread. Turn the crown slightly counterclockwise (backwards) until the locking interfaces fit. Push the crown towards the body into the right position while turning the clamping screw. Make sure the interfaces fit. Tighten the clamping screw firmly using the torque key.

Stability

The stability of the application is important in obtaining the best tool life and hole accuracy. Check the condition of the machine spindle, fixture and fixturing of the component to secure maximum stability and rigidity. Unstable conditions can cause tool breakages.

Rotating

Total Indicated Run-out (TIR) should not exceed 0,06 mm in a rotating application. Measure the run-out when the drill is mounted in the spindle.

Stationary

The distance between the drill point and the rotating centre of the workpiece should not exceed 0.03 mm radially in a stationary application.

Recommended tool holders

For best results, use holders type DIN 1835 B/DIN 6535 HB (Weldon). For further information see Tooling Systems catalogue.

Weldon

Drilling depth ~ 1,5 x D

SD101 -R7 shank

- Internal coolant
- ISO9766 fits holders: Weldon 1835B, ISO 5414, DIN 60880
- For cutting data see page(s) 129

Chamfer module – Mounting instruction/placement of module

1

Fit the module on the drill without chamfer insert or crown mounted.

2

If possible, place the module as close to the shank as possible.

DC		LU drilling depth			
		SD101 (min-max)		SD103 (min-max)	
(mm)	(inch)	(mm)	(inch)	(mm)	(inch)
12	.472	12-13	.472-.512	12-28	.472-1.102

Chamfer module – Cutting data

The recommended cutting speeds and feeds for Crownloc® on page 129-132 should also be used during the chamfering operation.

Troubleshooting

<p>Vibrations during chamfering</p>	<ul style="list-style-type: none"> • Reduce cutting speed • If possible, move the module closer to the shank of the drill. • If possible, use a shorter drill
--	--

Custom design – No waiting for quotations – Short delivery time

You can now design your own customised Crownloc® drill body or Crownloc® crown using the Custom Design software.

The concept gives you a number of advantages:

- No waiting for quotations! price and delivery time available instantly
- Directly visualises your needs. No risk of misunderstandings
- Short delivery time

Different types of custom drills – Detailed information can be found in the Custom Design software

Drilling diameter,
 $D_c = 10,00 - 25,99$
 Geometry: P = Steel
 M = Stainless Steel
 K = Cast iron
 L = Long chipping materials
 N = Non-ferrous materials
 H = Hardened steels
 Corner: Standard, chamfer, radius
 V: 100–150° (standard = 140°)

Available with 10 and 13 percent cobalt
 for more wear resistance.
 Ex: SD100-15.00-K10.

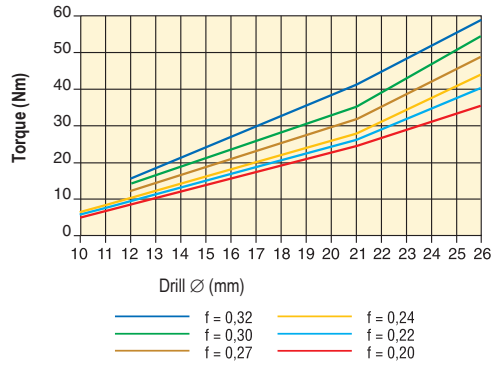

Machining data

The values in the graphs vary with e.g. cutting data, material, efficiency of the machine and tool wear. The graphs below are valid for Seco Material Group (SMG) P5-P6 and cutting speed 90 m/min.

Net power consumption

Drilling torque

Feed force

Coolant flow at different pressures

Hole tolerances/Surface finish

SD101, SD103, SD105 and SD107 IT9-10 / R _a 1-4*		
Drill Ø DC (mm)	IT9 tolerance (µm)	IT10 tolerance (µm)
10-18	43	70
18-30	52	84

*Deterioration of surface finish and hole tolerance can occur when drilling in low carbon steel or stainless steel. Use the shortest drill possible for best hole quality.

Recommended coolant flow Dx1 l/min

Minimum coolant flow D/2 l/min

D = Drill diameter

Minimum recommended coolant pressure 10 bar with < 3 x D

Minimum recommended coolant pressure 20 bar with > 3 x D

Minimum recommended coolant pressure 40 bar with > 5 x D

Coolant mix

Recommended emulsion mix is 6-8%.

When drilling in stainless steels, superalloys and high strength steels a mix of 10% is recommended.

Machining recommendations

It is possible to drill stacked material as long as the pieces are securely clamped together, so that there are no air gaps between the parts. Air gaps can affect chip evacuation, and thereby damage the drill.

Troubleshooting – Initial check points:

- Fixturing stability
- Machine spindle condition
- Tool holder condition
- Clamping of tool:
 - Run-out within 0.06 TIR
- Chip evacuation:
 - Cutting data
- Coolant:
 - Pressure
 - Flow
 - Concentration

<p>Cutting edges get chipped</p> <ul style="list-style-type: none"> • Reduce the feed/rev • If the drill vibrates, reduce the cutting speed and increase the feed rate • When drilling through rough, hard or angled surfaces, reduce the feed rate by 30%-50% during entrance and exit 	<p>Unsatisfactory diameter tolerance</p> <ul style="list-style-type: none"> • Increase the feed/rev • Use a Seco Feedmax solid carbide drill, see page(s) 18-21 • Use a reaming operation, see page(s) 231 • Use a boring operation, see page(s) 387-388 
<p>Too fast flank wear</p> <ul style="list-style-type: none"> • Check that correct geometry is used • Reduce the cutting speed 	<p>Unsatisfactory surface finish</p> <ul style="list-style-type: none"> • Reduce the feed/rev • Increase the cutting speed • Check that the correct geometry is used • Use a Seco Feedmax solid carbide drill, see page(s) 18-21 • Use a reaming operation, see page(s) 231 
<p>Groove wear</p> <ul style="list-style-type: none"> • Reduce the feed /rev • Reduce the cutting speed • Increase the coolant concentration 	<p>Unsatisfactory positioning of the hole</p> <ul style="list-style-type: none"> • Reduce the feed/rev • If drilling through rough, hard and angled surface - reduce the feed by 30%-50% during entrance and exit • Pre drill with a 140° point angle • Use a Seco Feedmax solid carbide drill see Feedmax page(s) 18-21 • Use a boring operation, see page(s) 387-388 
<p>Wear of peripheral land margins</p> <ul style="list-style-type: none"> • Check that the correct geometry is used • Reduce the cutting speed • Increase the coolant concentration • When drilling through rough, hard or angled surfaces, reduce the feed rate by 30%-50% during entrance and exit 	<p>Chip jamming due to long chips</p> <ul style="list-style-type: none"> • Increase the feed • In long chipping materials SMG P1-P4, SMG M1-M2: <ul style="list-style-type: none"> - Increase cutting speed and reduce feed/rev - Use the L geometry (Custom Design) 
<p>Breakage at hole exit</p> <ul style="list-style-type: none"> • If the crown connection breaks when the crown is just about to break through the material. The failure is caused by: <ul style="list-style-type: none"> • The interface has not been cleaned thoroughly and there is still dirt or chips left between crown and drill body • The crown has not been clamped securely. Use the torque key • Too few threads are holding the crown 	<p>Chipping of the locking interface</p> <ul style="list-style-type: none"> • Minor chipping is not hazardous to the locking system. It will not affect the drilling result • If major chipping occurs when using a high feed rate or when drilling through angled surfaces - reduce the feed rate 

Range overview

Crownloc® Plus	∅ Range	Drill depth	Crown tolerance	Hole tolerance (1)	Surface finish (2)
<p>SD403</p>  <p>Page(s) 134-135</p>	12,00–19,99 mm	~ 3 x D	k7	IT9-10	R _a 1–3 μm
<p>SD405</p>  <p>Page(s) 136-137</p>	12,00–19,99 mm	~ 5 x D	k7	IT10	R _a 1–3 μm
<p>SD408</p>  <p>Page(s) 138-139</p>	12,00–19,99 mm	~ 8 x D	k7	IT10	R _a 1–3 μm

1) Variations can occur depending on the material and the cutting data used.

2) Drill depth, cutting data, coolant pressure and material can cause deterioration of the surface finish.

Code key Crownloc® Plus

Code key Crowns

Mounting instructions

<p>1.</p>  <p>To unclamp the crown, find the two flats on the Crown for the key.</p>	<p>2.</p>  <p>Turn the key counterclockwise to unclamp it with a quarter of a turn.</p>	<p>3.</p>  <p>Clean the connection, before mounting the crown.</p>
<p>4.</p>  <p>Pre-clamp the crown with your fingers for easier clamping, before using the key.</p>	<p>5.</p>  <p>Simultaneously press down the crown when clamping on a quarter of a turn clockwise using the key and keep it perpendicular to the drill body.</p>	<p>6.</p>  <p>When the crown is mounted in the drill body, full contact should be achieved in the connection between the supporting surfaces of the drill body and the Crown, see picture.</p>

1. Stability

The stability of the application is important to obtain the best tool life and hole accuracy. Check the condition of the machine spindle, fixture and fixturing of the component to secure maximum stability and rigidity. Unstable conditions can cause tool breakages.

2. Rotating

Total Indicated Run-out (TIR) should not exceed 0,06 mm in a rotating application. Measure the run-out when turning the drill 360° in the spindle.

3. Stationary

The distance between the drill point and the rotating centre of the workpiece should not exceed 0.03 mm radially in a stationary application.

4. Recommended tool holders

For best results, use holders type BT JIS B 6339-ADB, Type 5672, High precision chuck. For further information see Tooling Systems catalogue.

Weldon

Hydraulic chuck
(For cylindrical, -R1 shanks only)

High precision collet chuck
(For cylindrical, -R1 shanks only)

Drilling depth ~ 3 x D

SD403 -R7 shank

- Internal coolant
- ISO9766 fits holders: Weldon 1835B, ISO 5414, DIN 60880
- For cutting data see page(s) 152

SMG = Seco material group

f = mm/rev

v_c = m/min

All cutting data are start values

Application information

Machined surface

No pre-drilling or entrance feed needed when using SD403 and SD405. When using a SD408 drill body pre-drilling is always recommended. (When using SD405 in stainless steel a pre-drilling operation might be needed).

Stacked material

It is possible to drill stacked material as long as the pieces are securely clamped together, so that there are no air gaps between the parts. Air gaps can affect chip evacuation, and thereby damage the drill.

Irregular/Angled hole entrance

Pre-drilling operation alternatives

If irregular or angle entrance use pre operations accordingly.

When using drills >3 x D pre-drilling with a standard tool e.g. SD403 is recommended

Machine a flat using an end mill from the Seco range.

Coolant recommendations

Coolant pressure

Minimum recommended coolant pressure 10 bar with $\leq 3 \times D$
 Minimum recommended coolant pressure 30 bar with $> 3 \times D$

Coolant mix

Recommended emulsion mix 6-8%. When drilling in stainless steels, superalloys and high strength steels a mix of 10% is recommended

First choice

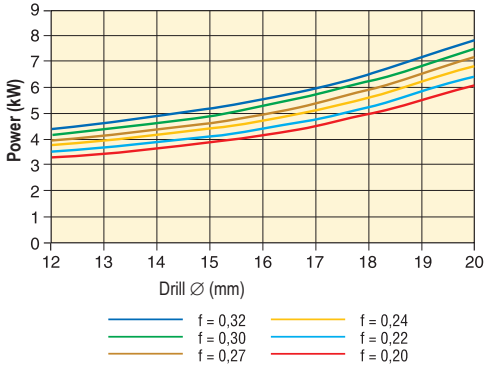

< 3 x D

Machining data

The values in the graphs vary with e.g. cutting data, material, efficiency of the machine and tool wear. The graphs below are valid for Seco Material Group (SMG) P5-P6 and cutting speed 90 m/min.

Net power consumption

Drilling torque

Feed force

Coolant flow at different pressures

Hole tolerances/Surface finish

SD403, SD405 and SD408 IT9-10 / R _a 1-4*		
Drill Ø DC (mm)	IT9 tolerance (µm)	IT10 tolerance (µm)
10-18	43	70
18-30	52	84

Recommended coolant flow Dx1 l/min

Minimum coolant flow D/2 l/min

D = Drill diameter

Minimum recommended coolant pressure 10 bar with $\leq 3 \times D$

Minimum recommended coolant pressure 20 bar with $\leq 5 \times D$

Minimum recommended coolant pressure 40 bar with $> 5 \times D$

Coolant mix

Recommended emulsion mix is 6-8%.

When drilling in stainless steels, superalloys and high strength steels a mix of 10% is recommended.

*Deterioration of surface finish and hole tolerance can occur when drilling in low carbon steel or stainless steel.

Use the shortest drill possible for best hole quality.

Troubleshooting

- Fixturing stability
- Machine spindle condition
- Tool holder condition
- Clamping of tool:
 - Run-out within 0.06 TIR
- Chip evacuation:
- Cutting data
- Coolant:
 - Pressure
 - Flow
 - Concentration

<p>Cutting edges get chipped</p> <ul style="list-style-type: none"> • Reduce the feed/rev • If the drill vibrates, reduce the cutting speed and increase the feed rate • When drilling through rough or hard surfaces, reduce the feed rate by 30%-50% during entrance and exit 	<p>Unsatisfactory diameter tolerance</p> <ul style="list-style-type: none"> • Increase the feed/rev. • Use a Seco Feedmax solid carbide drill, see page(s) 18-21 • Use a reaming operation, see page(s) 231 • Use a boring operation, see page(s) 387-388

Code key - Indexable insert drill – Metric

Shanks

ISO 9766

Universal choice fits into most holders on the market such as:

- Weldon 1835B
- ISO 5414
- DIN 69880

Coolant inlet at the back end of the drill.

Shank with two flats

Centre insert
cutting edge
above workpiece
centre line

For non rotating applications:

An additional flat is added to the shank for increased flexibility in lathe applications. In such applications the workpiece centre line and the drill centre line must align. If they don't the centre insert could be located above the workpiece centre line resulting in poor performance of the drill.

Centre insert
cutting edge
below workpiece
centre line

By turning the drill 180 degrees the second flat gives the possibility to compensate for this misalignment in a fast and simple way.

NOTE! If a drill with -7 shank is used in a rotating application together with our adjustable holder, the flat located on the same side as the centre insert must be used. Otherwise the drill diameter will be positioned in the wrong way.

Shanks

Seco-Capto

- Flexible - Same tool holder can easily be used in different machines
- Modular - Possibility to build tools with extension adapters
- High torque transmission - Torque load is spread symmetrically
- High rigidity - Tight press fit guarantees that there is no play in the coupling
- Accurate - Tapered polygon coupling produces a strong, self centering joint within 2 microns

-C
(4, 5, 6)

Graflex

- Fits directly into Graflex holders and locked with two ball headed locking screws placed 120°.
- Short overhang - rigidity and productivity
- Cylinder/face connection - great accuracy
- Coolant inlet at the back end of the drill

-G

ABS 50

- An ABS 50 Compatible shank
- Fits directly into ABS 50 holder with one locking screw
- Coolant inlet at the back end of the drill

-2

VDI30 and VDI 40

- VDI compatible shank
- Fits directly into holders for
 - VDI 3425 bl.2
 - DIN 69880

-8

NOTE! The coolant ring must ordered separately

Shanks

Available in:

VDI 30	VDI 40
	
Accessories Coolant ring	Accessories Coolant ring
SDA5-30R8	SDA5-40R8

1. Fit the ring around the drill but do not tighten the locking screw

2. Lock the drill in the collet

3. Tighten the locking screw in the coolant ring

Coolant ring

Drilling depth ~ 2 X D – Metric

Regrinding instructions for SD602

1. Point angle

Edge preparation 0,1 mm x 20°. Drill point conical relief 10°.

2. Corner chamfer

3.

4.

Diameter	A	B	Q	Minimum (length)
10	1,5	0,5	0,57	38
15	1,5	0,6	0,68	45
25	1,5	1,4	1,6	57

Specifications

Proposed specification of diamond wheels:

Conical clearance: Wheel shape 12A2 Grit size D54 (figure 1).

Gashing: Wheel shape 1A1 or 1V1 Grit size D64-D46 (figure 3).

Corner chamfer: Wheel shape 1A1 or 12A2

Edge treatment: grinding K-land or brushing (figure 2).

Important:

The cutting edges must be uniform and have the same size of edge preparation. The edge preparation must be applied on the whole length of the cutting edges.

Modular drill head assembly

Feature: Adjustable pilot drill

Drill	Adjustable length distance ADJRG	Pilot drill x=0 Solid carbide x=1 HSS drill

SD602-3250-50RG	5 mm	SD601x-15-R
SD602-3500-50RG	5 mm	SD601x-15-R
SD602-4000-63RG	5 mm	SD601x-15-R

Adjustable length distance

Benefits: Same setting length after regrinding of pilot drill.
 Possibility to adjust the pilot drill overhang.
 With drill depths > 5 x D it is recommended to adjust it 5 mm further out.

Recommendation: In case of re-entering the hole the pilot drill should be adjusted 3 mm further out from its original position to ensure a better centering.

Use HSS pilotdrill as first choice.

Pilotdrill are not included in delivery.

Modular drill head assembly

Mounting instruction

1. Clean the parts to be assembled and apply thin oxidation protection film.
2. Assemble the parts ensuring that the left face of the tenon contacts the left face of the tenon slot
3. Lightly tighten screw A
4. Lightly tighten screw B
5. 'Torque' the blocking screw C
6. 'Torque' screw A
7. 'Torque' screw B
8. Double check the blocking screw tightening

Graflex size	d mm	D mm	l _c mm	Recommended Graflex connection locking torques	
				Ball nose screws (A) & (B)	Tenon blocking screw (C)
4	22	40	24	20 Nm	0,7 Nm

6	36	63	40	35 Nm	4 Nm
7	46	90	50	60 Nm	8 Nm

Insert grade

Features:

- 4 cutting edges per insert
- Strong square inserts

Benefits:

- Economy
- Reliability
- Performance
- Low cost per hole

Peripheral insert

	DP2000	<ul style="list-style-type: none"> • DURATOMIC® coating technology • Optimized grade for steel and cast iron machining • For machining with very high cutting speeds • A unique combination of superior edge toughness and a thick wear resistant coating • Ti(C,N) + Al₂O₃ DURATOMIC®

Custom design – No waiting for quotations! Price and delivery time available instantly!

A well defined strategy has been created for the total process for custom-made drills from quotation to finished drill. You can now design your own customised Perfomax® drill using the Custom Design software.

The concept gives you a number of advantages:

- No waiting for quotations! price and delivery time available instantly
- Directly visualises your needs. No risk of misunderstandings
- Short delivery time

B5. Counterbore and chamfer

B6. Counterbore with chamfers

E1. Core drill single diameter

E2. Core drill reinforced

F1. Drill heads
(With pilot drill)

Machining data – Power consumption, coolant volume requirement and force graphs

The values in the graphs vary with e.g., cutting data, material, with a machine efficiency of 80%.
The graphs below are valid for SMG P5-P6 and cutting speed 200 m/min.

Feed force

Net power consumption

Drilling torque

Machining data – Coolant volume requirement

(litres/min)

Coolant pressure requirement

Drilling depth	Recommended pressure (bar)		
	Drill diameter		
	15–25	> 25–40	> 40
< 3 x D	6	4,5	3
≥ 3 x D	12	9	6

Drilling of stacked materials

Drilling of stacked materials with no air gaps between the layers, (max 0,2 mm), can be done with SD523 3 x D and the SD542 2,5 x D drill. The component must be securely fixed so no flexing occurs when breaking through each layer.

Cutting data and insert recommendations for drilling of stacked materials

Insert geometry:

Centre insert: SPGX-C1

Periph insert: SCGX-P2

Carbide grade:

Centre insert: T400D

Periph insert: DP3000

Cutting speed: See recommendations for DP3000 carbide grade

Feed/rev: See recommendations for P2 geometry

If a problem occurs when breaking through each layer, reduce the feed/rev by 30-50%.

Caution!

The disc produced when the drill breaks through can be ejected at high speed when using the drill as a stationary tool, (rotating workpiece). It is most important to ensure that the machine is adequately guarded to ensure operator safety.

Set up

Hole diameter adjustment and set-up recommendation

The insert drills can be displaced off-centre to achieve a smaller or larger hole diameter than the actual drill.

For measurement see 'Radial adjustment' in the tool data table in the catalogue pages.

Rotating

Seco's adjustable holder is recommended for precision hole diameter IT10 setting when using SD522 and SD523, 3 x D as rotating drills.

Stationary

When mounting the drill make sure the cutting edges are parallel with the guide ways of the cross slide and that the drill centre line and workpiece centre line align. To achieve a larger hole diameter, displace the drill so that the periphery insert moves away from the workpiece centre line.

Machining data SD602 – Power consumption, coolant volume requirement and force graphs

The values in the graphs vary with e.g., cutting data, material, with a machine efficiency of 80%.
The graphs below are valid for SMG P5-P6 and cutting speed 200 m/min.

Feed force

(litres/min)

Methods

Versatility

1. Hole with angled entrance
2. Boring
3. Drilling across an existing hole
4. Drilling and plunging
5. Drilling and milling countersink by circular interpolation
6. Plunging

Recommendations:

- 2 x D and 3 x D drills (SD522, SD523)
- Reduce the feed ~ 50% when the drill is not fully engaged
- Use grade DP3000
- Use -P2 chipbreaker

Multiple choice in non rotating operations:

1. Drilling
2. Boring / Conical hole
3. Chamfering

Troubleshooting

Vibrations

- Check mounting of drill
- Check mounting of workpiece
- Increase feed. If a very soft material, reduce feed and increase speed
- Reduce the cutting speed

Insufficient torque

- Reduce feed
- Choose a geometry with harder chipbreaking for lower feeds

Insufficient power

- Reduce cutting speed
- Reduce feed
- Choose a geometry with harder chipbreaking for lower feeds. (SCGX-P1)

Chip Jamming Problems

Chip jamming problems due to long chips

- Increase feed. If a very soft material, reduce feed and increase speed
- Choose a geometry with harder chipbreaking for lower feeds. (SCGX-P1)

Chip jamming problems despite short chips

- Increase coolant pressure/volume
- Reduce cutting speed

Rapid flank wear on pilot drill

- Reduce the cutting speed
- Increase coolant concentration

Tool life problems

Chipping of periphery insert

- Reduce entrance feed
- Choose a tougher grade
- Choose a geometry with softer chipbreaking for higher feeds (SCGX-P2)
- Reduce feed
- Reduce cutting speed

Chipping of centre insert

- Check mounting of drill
- Check mounting of workpiece
- Reduce entrance feed
- Increase feed
- Reduce cutting speed

Too fast flank wear on periphery insert

- Reduce cutting speed
- Increase coolant pressure volume
- Choose a more wear resistant grade

Adjustable holders for drills

EPB 6100 – Adjustable drill holders, for type 7 drill shanks – ISO 9766 – Metric

Multi-cut or indexable insert – Choosing the best solution

Quality, performance and tool cost, all these objectives can be met. The choice of a reaming tool depends on hole tolerance, production quantity and cycle time. Seco Holemaking systems can meet these demands.

With Precimaster, Precifix, Bifix, new Xfix and Nanofix reamers Seco can solve all problems related to reaming operations.

The chart below helps you to choose the ideal reaming tool

	∅ Range	Reaming depth	Hole ∅ tolerance	Intermediate diameter	Surface finish (2)
<p>Precimaster™ Plus</p>  <p>Page(s) 232-260</p>	7,75–60,500	~ 2–10 x D	IT 6–7–8	Yes, available through Custom design	R _a 0,4–0,8 μm
<p>Nanofix™</p>  <p>Page(s) 261-281</p>	2,970-12,050	~ 5-12 x D	IT 7	Yes, available through Custom design	R _a 0,8–1,2 μm
<p>Bifix®</p>  <p>Page(s) 282-302</p>	5,900–60,500	~ 2–7 x D	IT 6–7	Yes, available through Custom design	R _a 0,2–0,8 μm
<p>Precifix™</p>  <p>Page(s) 303-324</p>	11,750–60,500	~ 2–10 x D	IT 6–7	Yes, available through Custom design	R _a 0,4–0,8 μm
<p>Xfix™</p>  <p>Page(s) 325-361</p>	39,500-154,500	~ 2,5-6,5 x D	IT 6	Yes, available through Custom design	R _a 0,4–0,8 μm

Range overview

Precimaster™ Plus	∅ Range	Reaming depth	Hole ∅ tolerance	Intermediate diameter	Surface finish (2)
 <p>PMX5/PMX6/PMX8</p>	7,75-60 mm	~ 2-3 x D	IT 6-7-8	Yes, available through Custom design	R _a 0,4-0,8 μm
 <p>PMX5/PMX6/PMX8</p>	7,75-60 mm	~ 4-5 x D	IT 6-7-8	Yes, available through Custom design	R _a 0,4-0,8 μm
 <p>PMX5/PMX6/PMX8</p>	7,75-60 mm	~ 8-10 x D	IT 6-7-8	Yes, available through Custom design	R _a 0,4-0,8 μm

Code key tool shank

Precimaster Plus toolholders are suitable for both blind and through holes.

Code key head

PMX6

Code key head intermediate diameter

PMX5

PMX8

PMX5 : Straight flutes design, suitable for blind and through bores.
 PMX6 : Helical flutes design, suitable for through bores only.
 PMX8: Straight flutes expandable, suitable for blind and through bores
 The left hand flutes design improves the action of pushing the chips forward.
 See Precimaster Plus head choice page 240.

Coolant set-up

Coolant outlet set-up procedure: Spare parts description

Coolant outlet set-up procedure: Blind bores coolant outlet set-up

1) Remove plug screw for through bore (blue)

Note : Plug screws are LH pitch

Use flat screw driver OR allen key, recommended hand-tool sizes as per table

Body size	Flat blade screw driver size	Allen Key size
		
PMX05	1,2 x 4 x 120	2 x 120
PMX06	1,0 x 5,5 x 150	2,5 x 150
PMX08	1,2 x 6,5 x 200	3 x 200
PMX12	1,2 x 8 x 200	5 x 200

2) Remove coolant sleeve

3) Mount plug screw for blind bores (red)

Note : Plug screws are LH pitch

Head mounting

<p>1) Make sure head geometry is suitable with coolant style</p>	 <p>PMX5 PMX6 Through bores</p>
	 <p>PMX5 Blind bores</p>
<p>2) Position clamp before head mounting</p>	
<p>3) Align index groove with red dot on body</p>	
<p>4) Place head into body</p>	
<p>5) Push head inside body until "click" is achieved</p>	
<p>6) Clamp head using allen key</p>	

Set up – Run-out

Rotating tool

Max recommended run-out : 10-15 μm .

Hydraulic chuck , Shrinkfit, holder or precision collet holder is recommended.

For best run-out control, we recommend to use Precimaster Plus PMX-AD adjustable adapters, see page 247-248

Static tool

Use Precimaster Plus floating holders PMX - FL. see page 249-250.

Floating holders allow reamer self-centring in pre-bore.

Coolant requirements

To reach maximum tool life and hole quality, the following coolant requirements should be observed.

Coolant through the tool is recommended.

External coolant supply can be used if reaming depth $< 2 \times D$.

Quality soluble oil with 40% minimum mineral oil.

Neat oil recommended for stainless steel.

Concentration minimum 6–8%.

Filtration 30–50 μm .

Volume min 0,5 l/min/mm in tool diameter. (Ex: Reamer \varnothing 10, min volume is 5 l/min).

Diameter measurement

Gauge clock micrometer prior to \varnothing measurement.

Important!

Precimaster reamers have differential pitch between the teeth.

When measuring the diameter, make sure that you have 2 teeth 180° opposite.

Use clock micrometer and measuring blocks for gauging.

Precimaster Plus Adjusting shanks set-up:

- 1) Mount tool in machine spindle
- 2) Set-up clock as shown

- 3) Rotate tool manually till lowest point is reached

- 4) Proceed to run-out compensation using adjusting screws. Direction as shown with arrows
- 5) Check run-out and repeat compensation if necessary

- 6) When maximum run-out is less than 5 μm , secure adjusting screws clamping to avoid losing adjustment

Precimaster Plus Floating shanks set-up:

1) Completely lock floating shank turning adjusting ring clockwise

2) Open floating shank 2 or 3 clicks turning adjusting ring anti-clockwise

3) Proceed to further floating value adjustment if necessary
Too much floating value can create unstable conditions at bore entry.
Too few floating value can create vibrations and tapered bore.

Precimaster Plus Expandable reamer wear compensation:

1) Use hexagonal allen key to compensate tool \emptyset wearing
(60° revolution = approximately 5 μm compensation on \emptyset)

2) Check \emptyset dimension after expansion using clock micrometer

Head choice – Choose cutting head style according to application and diameter

Workpiece	Diameter to ream \varnothing 10-60	
<p>Short through hole < 3 x D</p> 	<p>PMX5/PMX8</p> 	
<p>Long through hole > 3 x D</p> 	<p>PMX6</p> 	
<p>Crossing hole</p> 	<p>For through bore application, toolholder coolant outlet must be set for through holes: see coolant set up pages</p>	
<p>Blind hole</p> 	<p>PMX5/PMX8</p> 	
<p>Blind and crossing hole</p> 	<p>For blind bore application, toolholder coolant outlet must be set for blind holes: see coolant set up pages</p>	

Geometry choice – Applications

Lead geometry - EB45

Chip control +++
 Surface Finish + (R_a 0,8 - 1,2 μm)

 Chip control +

Grades

	CP20	Coated A versatile coated grade suitable for most materials, except aluminum. TiN
	H15	Uncoated A tough micrograin grade for all materials. Suitable for fine-reaming operations due to edge sharpness.
	CF	Cermet A wear resistant grade for performance optimization in steel.
	RX1500	Coated Cermet A wear resistant coated grade for performance optimization in steel and cast iron.
	RX2000	Coated High performance coated grade suitable for all materials.

Grades

	RN2010	A sub-micrograin uncoated grade with optimized geometries for N-materials (non ferrous).
	RM2020	A tough coated grade suitable for fine reaming operation with optimized geometries for M materials.
	RM2090	A wear resistant coated grade with specific geometries for M materials. Optimisation in M materials.
	RS2090	A wear resistant coated grade with specific geometries for S materials. Optimisation in S materials.

Heads for through and blind holes \varnothing 8-32 mm

No waiting for quotations – Short delivery time

Custom Design is also available for Precimaster Plus reamers and tool holders.

You can now quote for your own intermediate \varnothing reamer and tailor made Precimaster Plus tool holder using the Seco Custom Design software.

Easy to use concept: Just indicate component min/max \varnothing or use ISO tolerance system available in the software.

Precimaster Plus head designation is created automatically.

Custom Design gives you a number of advantages:

- No waiting for quotations! Price and delivery time available instantly!
- Directly visualises your needs. No risk of misunderstandings
- Short delivery time

The screenshot displays the SECO CUSTOM DESIGN software interface. At the top, it shows the SECO logo, the title 'CUSTOM DESIGN', and the version '1.8.2.1'. The breadcrumb navigation is 'Reaming >> Precimaster Plus >> Precimaster Plus Cutting Heads'. There are links for 'Back', 'Start Page', 'Login', and 'English'. A 'Print this page' icon is also present.

The main content area is titled 'Step 1: Tool Specification' and 'Step 2: Request for Quotation'. On the left, there is a 3D model of a reamer tool with a yellow cutting edge. A callout shows a cross-section of the cutting edge with a lead angle of 45° and a width of $0.50\text{mm} / 0.0197''$. The cutting edge is labeled 'EB45'. Below the model, a diagram shows the reamer's diameter range with labels 'D', 'D_{MIN}', and 'D_{MAX}'.

On the right, there is a 'Request for Quotation' form. It includes a 'Material cutting choice' dropdown set to 'S2 / Co-based super alloys', a 'Work piece' dropdown set to 'C. Crossing hole PMX6', and a 'Tolerance' dropdown set to 'Custom'. Below these are input fields for 'Workpiece Diameter Minimum Dmin' (9.9 to 60.469, value 30.5), 'Workpiece Diameter Maximum Dmax' (30.516 to 30.6, value 30.525), 'Geometry' (EB45), and 'Grade' (RS2090). A note states: 'Reamer diameter Dc position : 45% of the workpiece tolerance' and 'Note : SECO recommend the using of an adapter to correct the run-out for your application'. There are 'Previous', 'Request quotation', and 'Spare Parts' buttons.

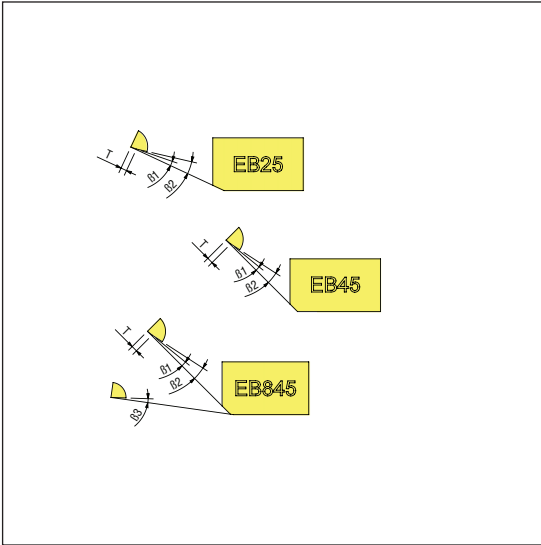

At the bottom right, there is a 'Designation' field containing 'PMX6-30.500/30.525EB45,RS2090' and a 'Delivery Time' section with 'Quantity: 2' and 'Min Quantity: 1', along with a 'Send request' button.

Please contact your local Seco representative for more information.

Specifications

Diamond grinding wheel

Grain size:

D6 – For first clearance angle (β_1 – β_3)

D64 – For second clearance angle (β_2)

Important:

Regrinding reduces reamer diameter

Recoating may produce oversized diameter

Recoating may cause driving pin loosening

Max run-out on lead chamfers 10 μ m

Range overview

Nanofix™	∅ Range	Reaming depth	Drill ∅ tolerance	Intermediate diameter	Surface finish (2)
	2,97-12,05 mm	5-12 x D	IT 7	Yes, available through Custom design	R _a 0,8–1,2 μm

Nanofix™ is a Seco solid carbide reamer programme dedicated for small ∅ from 2,97 to 12,05 mm.

Design includes a unique patented Quick-fit clamping system that will allow it to hold the entire diameter range with only 2 tool holders .

Tool holders have internal coolant with a simple adjustable system so the outlet style can be set for either through or blind bore, depending on application.

Quick-fit clamping

Quick and easy tool change.
Accurate repositioning in run-out and length.

2 Quick-fit sizes to cover the complete diameter range

Quick-fit \varnothing 10 mm for
 \varnothing 6,051-12,050 mm.

Quick-fit \varnothing 6 mm for
 \varnothing 2,97 -6,050 mm.

Same tool for blind or through hole application

through

blind

Turn coolant style adjusting screw by 1/4 of a revolution to change coolant outlet from through to blind and vice-versa.

Code key - Reamers

Code key - Intermediate diameter reamers

Code key - Shanks

Run-out

Rotating tool

Max. run-out recommended: 5 µm.
 Precision holder is recommended : Hydraulic chuck, D-type collet chuck or 5672 collet chuck.

Note: due to coolant outlet adjustment sealing o-ring, the use of a Shrinkfit holder is not recommended.

Static tool

Use a Seco floating holder, see page 375-379.

Floating holders allow reamer self-centering in pre-bore.

Coolant requirements

To reach maximum tool life and hole quality, the following coolant requirements should be observed.

Coolant through the tool is recommended.
 External coolant supply can be used with cutting condition reduced by 75%.

Soluble oil with 40% minimum mineral oil.
 Neat oil recommended for stainless steel.

Concentration minimum 6–8%.
 Filtration 30–50 µm.
 Volume min 0,5 l/min/mm in tool diameter (Ex: Reamer Ø10, min volume is 5 l/min).

Diameter measurement

Gauge clock micrometer prior to Ø measurement.

Important!

Nanofix reamers have differential pitch on teeth.
 When measuring the diameter, make sure that you have 2 teeth 180° opposite.

Use clock micrometer and measuring blocks for gauging.

Lead geometries and grades – Applications

Lead geometry - EB45

Chip control +++
 Surface Finish + (R_a 0,8 - 1,2 μm)
 Versatile

Lead geometry - EB845

Chip control ++
 Surface finish+++ (R_a 0,2 - 0,8 μm)

Lead geometry - EB25

Feed performance +++
 Surface finish ++ (R_a 0,4 - 0,8 μm)
 Chip control +

Grades

	H15	Uncoated A tough micrograin grade for all materials. Suitable for fine-reaming operations due to edge sharpness.
	RX2000	Coated High performance coated grade suitable for all materials.

Grades

	RN2010	A sub-micrograin uncoated grade with optimized geometries for N-materials (non ferrous).
	RM2020	A tough coated grade suitable for fine reaming operation with optimized geometries for M materials.
	RM2090	A wear resistant coated grade with specific geometries for M materials. Optimisation in M materials.
	RS2090	A wear resistant coated grade with specific geometries for S materials. Optimisation in S materials.

■ Stock standard □ Non stock standard. Subject to change refer to current price- and stock-list.

Note: When ordering Nanofix reamers for intermediate diameters, please state diameter and tolerance of hole to be reamed.

Ordering example: NS10-10,187/10,213-EB845, RX2000.

Intermediate diameter

- For cutting data see page(s) 279
- For choice of geometry EB45 or EB845, please see page(s) 266

Spare Parts

	Spare Clamping Kit	Key
2,97-6,050	NF06-CLKI	CLC06KEY
6,051-12,050	NF10-CLKI	CLC10KEY

Spare clamping kit for Nanofix holders includes:

- 1 clamping nut
- 1 axial stop spring ring
- 3 clamping balls (dia 3,5 mm for size NF06 & dia 5 mm for size NF10)
- 1 fool-proof ball (dia 3 mm for size NF06 & dia 4 mm for size NF10)
- 1 o-ring

Note: fool-proof ball not shown on above view.

Custom design – No waiting for quotation – Short delivery time

Custom Design is also available for Nanofix reamers and tool holders.

You can now quote for your own intermediate \varnothing reamer and tailor made Nanofix tool holder using the Seco Custom Design software.

Easy to use concept: Just indicate component min/max \varnothing or use ISO tolerance system available in the software.

Nanofix head designation is created automatically.

Custom Design gives you a number of advantages:

- No waiting for quotation! Price and delivery time is available instantly!
- Directly visualize your needs. No risk for misunderstandings
- Short delivery time

Delivery Time
 Quantity: Send request
 Min Quantity: 2
 Max Quantity: 20

Regrinding instructions

∅ Nanofix	β_1	β_2	β_3	t
2.97-12.050 mm	8°	25°	10°	0.15 mm

Specification:

Diamond grinding wheel
 Grain size:
 D6 for 1st clearance angle ($\beta_1 - \beta_3$)
 D64 for 2nd clearance angle (β_2)

Important

Regrinding reduces reamer diameter
 Recoating may produce oversized diameter
 Max run-out on lead chamfers 10 μ m

Bifix®	∅ Range	Reaming depth	Drill ∅ tolerance	Intermediate diameter	Surface finish (2)
<p>SR80 For through holes</p> 	5,900–60,500 mm	3–5–7 x D	IT 6-7	Yes, available through Custom design	R _a 0,2–0,8 μm
<p>SR81 For blind holes</p> 	7,875–60,500 mm	3–5–7 x D	IT 6-7	Yes, available through Custom design	R _a 0,2–0,8 μm
<p>SR82 For blind holes short version</p> 	7,875–60,500 mm	2–3–5 x D	IT 6-7	Yes, available through Custom design	R _a 0,2–0,8 μm

Code key – Reamers

Unless requested otherwise, reamers are designed to produce a diameter in the middle of the required tolerance.

Reamer type:

Type 80: Through hole

Type 81: Blind hole

Type 82: Blind hole, short version

Type of lead geometry

EN1, EN2, EN3

SR80 - 16,85 P6 - EN1 - R - 9

Hole diameter
and tolerance

Shank type: (to be stated when requested
style is not standard)
SR80 and SR81: R1 without flat is standard
SR82: R9 with flat is standard

Code key – Blades

Important: The reamer and the blade must have the same lead geometry.

Blade size:

P00, P0, P1

P2, P4

Cutting rake

angle:

0°, 6°, 12°

P2 - EN1 - 06 CP20

Type of lead geometry
EN1, EN2, EN3

Carbide grade:
CP20, H15

Set up and machining data

Rotating tool

Max. run-out recommended: 0,02 mm.

Precision holder is recommended : Hydraulic chuck, D-type collet chuck, 5672 collet chuck or shrink-fit.

Stationary tool

Use a Seco floating holder, see page 375-379.

For optimal chip evacuation

Recommended blade orientation for static tools
(see drawing, view from front of tools).

Coolant requirements

To reach maximum tool life and hole quality, the following coolant requirements should be observed.

Coolant through the tool is recommended. External coolant supply can be used if reaming depth $< 2 \times D$.

Quality soluble oil with 40% minimum mineral oil. Neat oil recommended for stainless steel.

Concentration minimum 6–8%.

Filtration 30–50 μm .

Volume min 0,5 l/min/mm in tool diameter. (Ex: Reamer $\varnothing 10$, min volume is 5 l/min).

Setting fixture

SF-60200-C160C190: Part No. 02885396

- Horizontal stand
- First choice for \varnothing smaller than 60 mm
- 2 clocks
- Maximum tool \varnothing : 60,5 mm
- Maximum tool length: 200 mm

Choice of blade – Select a lead geometry

EN1 - General information

Maximum machining allowance on \varnothing 0,5 mm.
Surface Finish + (R_a 0,3 - 0,8 μm)

EN2 - Short lead

Maximum machining allowance on \varnothing 0,3 mm.
Surface finish (R_a 0,4–1,2 μm).
Maximum feed rate 0,2 mm/rev.
Only to be used when a short lead is required. Designed with end cutting.

EN3 - Extreme surface finish

Maximum machining allowance on \varnothing 0,5 mm.
Surface finish (R_a 0,2–0,6 μm).
Suitable for all materials except aluminium.
To be used when R_a should be $< 0,3$ – $0,4$ μm .

Note that reamer and blade must have the same lead geometry.

Grade and rake angle

Use the tables on page 490 to classify the workpiece material into SMG.

Use the blade and cutting data recommendation table on page 297-299 to choose grade and rake angle.

The blade programme is on page 295.

For through holes \varnothing 6H6-26H6 – Shank type R1, cylindrical without flat

- Blade information on page(s) 295
- Internal 'through' coolant

	•		•			X			Pxx-ENx-06	CP15
	•	•		•	•	X			Pxx-ENx-12	CP15

Grades

	CP15	<p>Coated A wear-resistant coated grade alternative to CP20. For optimization in cast iron and steels. Also suitable for non-ferrous. Ti(C, N)</p>
	CP20	<p>Coated A versatile coated grade suitable for most materials, except aluminum. TiN</p>
	H15	<p>Uncoated A tough micrograin grade for all materials. Suitable for fine-reaming operations due to edge sharpness.</p>

Custom design – No waiting for quotation – Short delivery time

Custom Design is also available for Bifix reamers and tool holders.

You can now quote for your own intermediate \varnothing reamer and tailor made Bifix tool holder using the Seco Custom Design software.

Easy to use concept: Just indicate component min/max \varnothing or use ISO tolerance system available in the software.

Bifix head designation is created automatically.

Custom Design gives you a number of advantages:

- No waiting for quotation! Price and delivery time is available instantly!
- Directly visualize your needs. No risk for misunderstandings
- Short delivery time

CUSTOM DESIGN

SMG = Seco material group

a_p = mm

f = mm/rev

v_c = m/min

All cutting data are start values

Adjustment instructions

1

Loosen the two adjustment screws (7) by a 1/4 turn.

2

Loosen the two clamping screws (5).

3

Clean the blade seat thoroughly then, index the used blade (2) edge or replace it.

4

Firmly push the blade against the axial end stop and the adjustment balls (6).

5

Tighten the clamping screws carefully.
(Hold the key at its shortest end for correct torque).

6

Set the μm clock to zero using the cylindrical rear end of guiding pads (3).

Adjustment instructions

7

Set the rear end of the blade to a diameter so that a back taper of 0,01 mm/10 mm blade length is achieved (see figure 2).

8

Set the μm clock to zero using the cylindrical front end of guiding pads (3).

9

Set the front end of the blade to 0,02 mm or 0,015 mm above the guide pads (3) clock A, see figure 1.
Check again back taper value (steps 6 and 7) clock B.

10

figure 1

Note: If the required diameter is exceeded during adjustment, start again from the beginning to eliminate backlash on adjustment screws.

0,015 mm ($\varnothing \leq 10$ mm)
0,020 mm ($\varnothing > 10$ mm)
clock A value for \varnothing setting

figure 2

Setting chart

Diameter range	Blade size	Front clock A	Rear clock B
5,900-6,874	P00	+15	+5
6,875-8,749	P0	+15	-5
8,750-10,000	P1	+15	-5
10,001-12,749	P1	+20	0
12,750-19,499	P2	+20	0
19,500-60,500	P4	+20	0

- Clock unit = 1 μm
- Front & rear clock values valid when set zero on adjacent pad
- Rear clock values calculated on back taper of 1 $\mu\text{m}/\text{mm}$ of blade

Code key – Heads

Code key – Heads – Intermediate diameter

Code key – Inserts

Set up – Run-out

Rotating tool

0,02 mm max

Max. run-out allowed is 0,02 mm.

Precision holder is recommended : Hydraulic chuck, D-type collet chuck, 5672 collet chuck or Shrinkfit.

Stationary tool

Use a Seco floating holder, see page 375-379.

Coolant requirements

To reach maximum tool life and hole quality, the following coolant requirements should be observed.

Coolant through the tool is recommended. External coolant supply can be used if reaming depth < 2 x D.

Quality soluble oil with 40% minimum mineral oil. Neat oil recommended for stainless steel.

Concentration minimum 6–8%.

Filtration 30–50 µm.

Volume min 0,5 l/min/mm in tool diameter. (Ex: Reamer Ø 10, min volume is 5 l/min).

Setting fixture

SF-60200-C160: Part No. 02885395

- Horizontal stand
- First choice for Ø smaller than 60 mm
- 1 clock
- Maximum tool Ø: 60,5 mm
- Maximum tool length: 200 mm

Grades

	<p>T100R</p>	<p>Coated PVD coated hard micrograin grade, suitable for most materials. (Ti,Al) N</p>
	<p>H02</p>	<p>Uncoated A tough micrograin grade for all materials. Suitable for fine-reaming operations thanks to very good edge sharpness.</p>
	<p>CM</p>	<p>Cermet A very high wear resistant grade. Intended for finishing operation on steels, in which strict demands are made on surface finish.</p>

Heads for Ø11,750-17,499 mm

Custom design – No waiting for quotations – Short delivery time

Custom Design is also available for Precifix reamers and tool holders.

You can now quote for your own intermediate \varnothing reamer and tailor made Precifix tool holder using the Seco Custom Design software.

Easy to use concept: Just indicate component min/max \varnothing or use ISO tolerance system available in the software.

Precifix head designation is created automatically.

Custom Design gives you a number of advantages:

- No waiting for quotations! Price and delivery time available instantly!
- Directly visualises your needs. No risk of misunderstandings
- Short delivery time

SMG = Seco material group

a_p = mm

f = mm/rev

v_c = m/min

All cutting data are start values

Adjustment instructions

<p>1 Unscrew blade locking screw 'A' and remove blade '1'.</p> 	<p>6 Tighten clamping screw 'B'.</p> 	
<p>2 Loosen clamping screw 'B' 2-3 revolutions.</p> 	<p>7 Clean the blade seat thoroughly then, index the used blade '1' or replace it.</p> 	
<p>3 Tighten adjusting screw 'C' to push adjustable cartridge '2' and unlock cylindrical clamp '3'.</p> 	<p>8 Place clock at front end of blade and set to zero using the cylindrical guiding pads '4'.</p> 	
<p>4 Push adjustable cartridge '2' fully back in its seat pocket.</p> 	<p>9 Set the insert to 0,02 mm above guiding pad '4'.</p> 	
<p>5 Put cylindrical clamp '3' back in position against adjustable cartridge '2'.</p> 		
		
<p>1 = Insert 2 = Adjustable cartridge 3 = Cylindrical clamp 4 = Guiding pads</p> <p>A = Insert locking screw B = Clamping screw C = Adjusting screw</p>		

Note: If the required diameter is exceeded during adjustment, start again from the beginning to eliminate backlash on adjustment screws.

Coolant setting instructions

<p>1 Unscrew blade locking screw 'A' and remove blade '1'.</p>	<p>4 Push adjustable cartridge '2' fully back in its seat pocket.</p>
<p>2 Loosen clamping screw 'B' 2-3 revolutions.</p>	<p>5 Index and put cylindrical clamp '3' back in position against adjustable cartridge '2': Mark on clamp facing 'T' index – Coolant outlet set for THROUGH holes. Mark on clamp facing 'B' index – Coolant outlet set for BLIND holes.</p>
<p>3 Tighten adjusting screw 'C' to push adjustable cartridge '2' and unlock cylindrical clamp '3'.</p>	<p>6 Tighten clamping screw 'B'.</p>

<p>7 Proceed to blade setting - Adjustment instructions see previous page.</p>		
<p>1 = Insert 2 = Adjustable cartridge 3 = Cylindrical clamp 4 = Guiding pads</p> <p>A = Insert locking screw B = Clamping screw C = Adjusting screw</p>		

Troubleshooting

<p>Poor surface finish</p> <ul style="list-style-type: none"> • Check material allowance • Improve coolant conditions (outlet type, pressure, quality) • Reduce feed rate • Change blade (wrong lead geometry or wrong rake angles) • Check axial position of blade 	<p>Facets</p> <ul style="list-style-type: none"> • Improve centering (part/tool) 
<p>Retraction marks</p> <ul style="list-style-type: none"> • Improve coolant conditions (outlet type, pressure, quality) • Improve centering (part/tool) 	<p>Off center/Ovality</p> <ul style="list-style-type: none"> • Improve clamping (workpiece deformation) • Check material allowance • Improve centering (part/tool) • Check axial position of blade 
<p>Tapered entry</p> <ul style="list-style-type: none"> • Reduce feed rate • Improve centering (part/tool) • Reduce radial run-out 	<p>Tapered hole</p> <ul style="list-style-type: none"> • Improve centering (part/tool) 
<p>Deformed hole</p> <ul style="list-style-type: none"> • Improve clamping (workpiece deformation) 	<p>Curved hole</p> <ul style="list-style-type: none"> • Change blade (wrong lead geometry) • Check axial position of blade 
<p>Too large diameter</p> <ul style="list-style-type: none"> • Improve centering (part/tool) • Adjust diameter (too large) 	<p>Adhesion to pads</p> <ul style="list-style-type: none"> • Improve coolant conditions (outlet type, pressure, quality) • Adjust diameter (too small) 

Range overview

Xfix™	∅ Range	Reaming depth	Drill ∅ tolerance	Intermediate diameter	Surface finish (2)
	39,500-154,500 mm	2,5–6,5 x D	IT 6	Yes, available through Custom design	R _a 0,8–1,2 μm

Xfix™ is a specially developed Seco Reaming programme, dedicated for large ∅ 39,5 to 154,5 mm. Design includes adjustable and indexable inserts to achieve IT 6 accurate tolerance, as well as a built in adjustable run-out adapter to guarantee component quality. Multi-teeth construction and patented pre-loaded guiding pads offering maximum stability and productivity for large ∅ reaming operations.

Feature details

- 4 or 8 cutting edges for optimisation in all materials
- Stable clamping system
- Easy adjustment with 1 adjusting screw for easy setting
- Grade and geometry choice for different applications

- Patented pre-loaded guiding pads system for application stability
- Pads lubrication for performance and safety

- Integrated adjustable adapter for perfect run-out control

- Shanks and extension programme from Seco Tooling Systems catalogue offer maximum modular

Custom design – No waiting for quotation – Short delivery time

Custom Design is also available for Xfix reamers and tool holders.

You can now quote for your own intermediate Ø reamer and tailor made Xfix tool holder using the Seco Custom Design software.

Easy to use concept: Just indicate component min/max Ø or use ISO tolerance system available in the software.

Xfix head designation is created automatically.

Custom Design gives you a number of advantages:

- No waiting for quotation! Price and delivery time is available instantly!
- Directly visualize your needs. No risk for misunderstandings
- Short delivery time

CUSTOM DESIGN

Version 1.7.9.6

SMG = Seco material group

a_p = mm

f = mm/rev

v_c = m/min

All cutting data are start values

Adjusting instructions

1

- Loosen cartridge clamping screw
- Index or replace insert
- Unclamp adjusting screw by 1/4 of a turn and push cartridge back
- Gently re-clamp cartridge clamping screw (0,5 Nm approx)

Cartridge clamping screw
Adjusting screw

2

- Set clock to "zero" on reference pad.
- Make sure measuring point is positioned after the lead angle.

"0"

Pre-loaded guiding pad
Reference pad for adjustment

3

- Set insert 0,025 mm above reference pad using adjusting screw
- Repeat adjusting process for all inserts

+ 0,025 mm above reference pad

Adjusting screw

4

- Final clamp cartridge clamping screw (2 Nm).

Cartridge clamping screw

Note: If the required diameter is exceeded during adjustment, start again from the beginning to eliminate backlash on adjustment screws.

Adjusting instructions, adapter

1. Assembly

- Thoroughly clean flange contact surface.
- Loosen 4 radial adjusting screws so they do not interfere for assembly.
- Put reaming head onto adapter (indexing pin) and tighten the 4 clamping screws.

2. Clamping screws

3. Radial adjusting screws (drawing 4)

2. Setting

- Mount tool in the machine spindle.
- Place µm clock as shown in (drawing 2).
- Unlock spindle so it can rotate freely by hand.
- Start run-out correction using 4 adjusting screws (drawing 3).
- Max run-out 5 µm.
- When run-out values get lower than 10 µm, proceed to final clamping (drawing 1) see clamping torque table for torque recommended values.
- Finalize run-out adjustment (Max 5 µm).

Clamping torque table

Diameters	Adapter size	Clamping screw	Clamping torque Nm
39,5-59,499	HF32	CHC M3 x 16	2,7
59,5-84,499	HF55	CHC M5 x 25	5,7
84,5-119,499	HF80	CHC M6 x 25	9,8
119,5-154,499	HF100	CHC M8 x 30	24

Setting fixture – Single clock fixtures

SF-210340-C160: Ordering and Part No. 02885391

- Horizontal stand
- First choice for Xfix reamers
- 1 clock
- Maximum tool \varnothing : 210 mm
- Maximum tool length: 340 mm
- Additional \varnothing 57 mm spring centre for HSK 63/80/100 and Capto C8

Centre point SSC5700 included in delivery

SF-210290V-C160: Ordering and Part No. 02885392

- Vertical stand
- First choice for Xfix reamers
- Maximum tool \varnothing : 210 mm
- Maximum tool length: 290 mm
- Additional \varnothing 57 mm spring centre for HSK 63/80/100 and Capto C8

Centre point SSC5700 included in delivery

Possibilities for multi-clock set up refer to setting fixture chapter page 360, 380-385 for more details

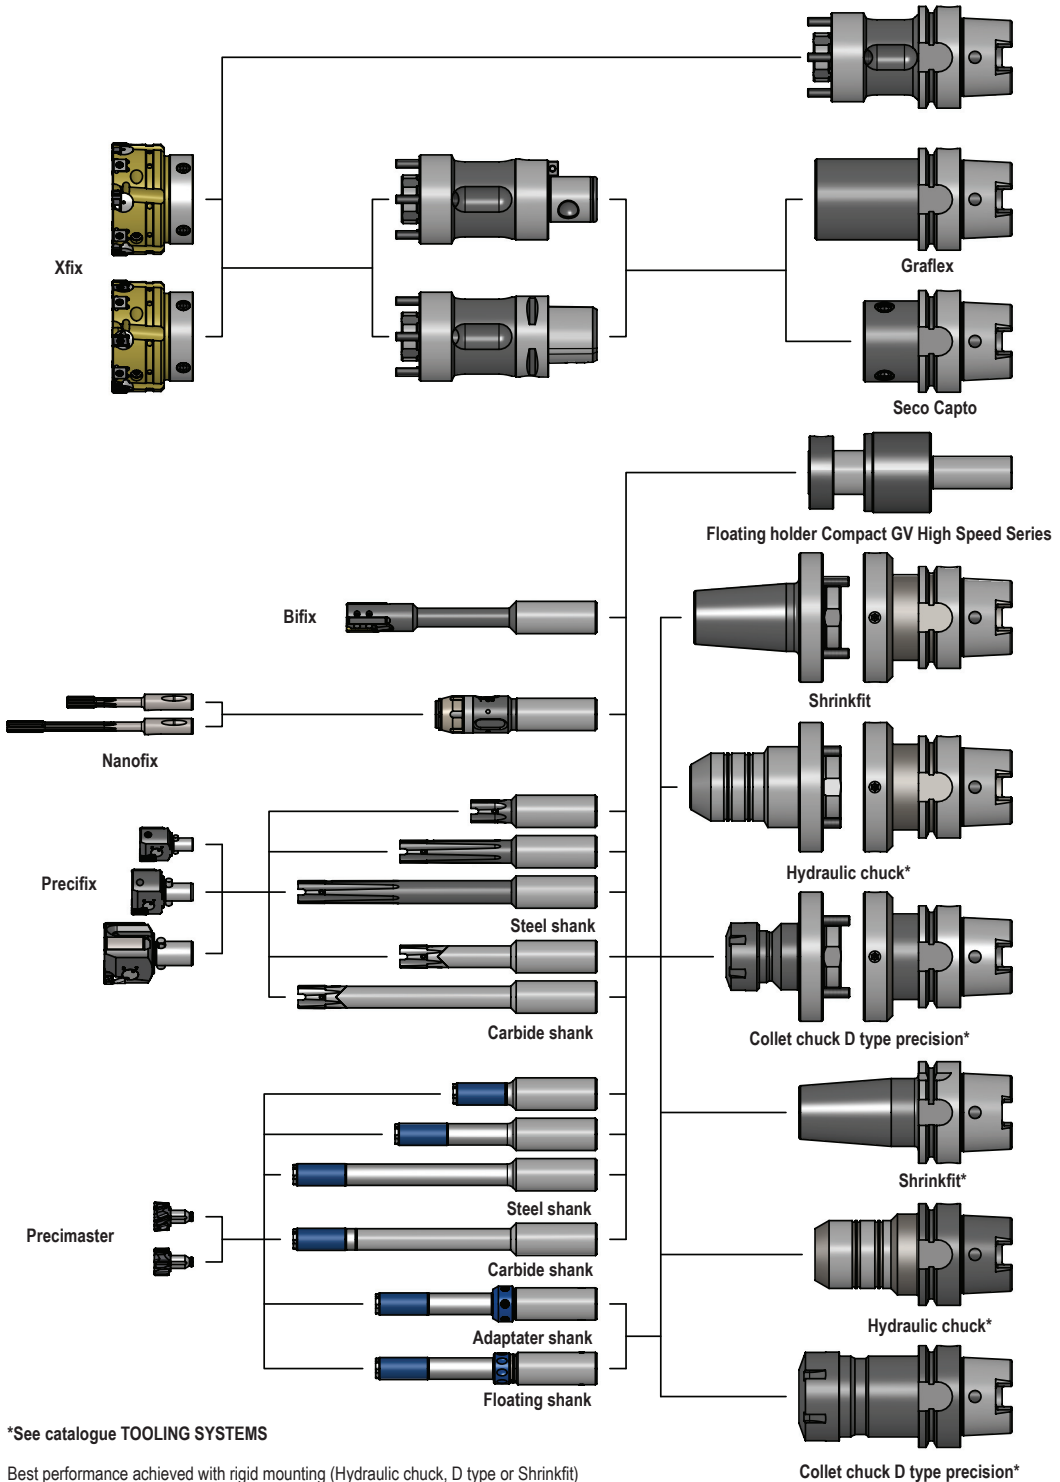

Tooling overview

Diameter	Max dia/length ratio
39,5-59,499	6,5 x D
59,5-84,499	4,5 x D
84,5-119,499	3,3 x D
119,5-154,499	2,5 x D

Note: For diameters > 100 mm or L > 3 x D check max tool weight acceptable in the machine.

Rotating applications

*See catalogue TOOLING SYSTEMS

Best performance achieved with rigid mounting (Hydraulic chuck, D type or Shrinkfit)

Static applications

Assembly instructions

- Clean contact surface
- Make sure radial adjusting screws are not interfering with the assembly

- Make sure angular adjusting screws are not interfering with the assembly

- Proceed to assembly and gently pre-clip clamping screws (x4)

Adjusting instructions

- Mount tool in the machine spindle
- Set up clock 1 as shown (clock 2 not needed at this stage)
- Rotate tool manually until lowest point is reached
- Proceed to radial run-out compensation as shown with arrow
- Check and repeat compensation if necessary

- Set up clock 2 as shown
- Rotate tool manually until lowest point is reached
- Proceed to radial run-out compensation as shown with arrow
- Check and repeat compensation if necessary

- When finished with adjustment (run-out <math>< 5 \mu\text{m}</math>) finalize clamping to secure assembly

Note:

- Adjustable adapter can be pre-set away from the machine using any tool pre-setting device available in the workshop
- Final adjusting must always be made in the machine spindle
- Micron clock must be used. It is acceptable to use one clock for both operations

Range overview

The use of a Seco floating holder is recommended

- When run-out exceeds 0.0008 inch (0.02 mm)
- For stationary tools

Compact GV high speed series

- First choice for rotating tools
- No adjustment required (factory preset)
- Rotation up to 3000 rpm depending on application
- Suitable for static applications

Compact series

- First choice for stationary tools
- Radial adjustment only
- Suitable for rotating applications – 800 rpm max

Normal series

- When both angular and radial correction is required
- Suitable for rotating applications – 800 rpm max

All floating holders for through coolant
2 types of coolant induction available

JJL: side inlet
JJ: through shank

Users manual included in delivery

Setting fixture – Single clock fixtures

SF-210340-C160: Ordering and Part No. 02885391

- Horizontal stand
- First choice for Xfix reamers
- 1 clock
- Maximum tool Ø: 210 mm
- Maximum tool length: 340 mm
- Additional Ø 57 mm spring centre for HSK 63/80/100 and Capto C8

Centre point SSC5700 included in delivery

SF-210290V-C160: Ordering and Part No. 02885392

- Vertical stand
- First choice for Xfix reamers
- Maximum tool Ø: 210 mm
- Maximum tool length: 290 mm
- Additional Ø 57 mm spring centre for HSK 63/80/100 and Capto C8

Centre point SSC5700 included in delivery

Dual clock fixtures

SF-210340-C160C190: Ordering and Part No. 02885393

- Horizontal stand
- First choice for Bifix reamers
- 2 clocks
- Maximum tool Ø: 210 mm
- Maximum tool length: 340 mm
- Additional Ø 57 mm spring centre for HSK 63/80/100 and Capto C8

Centre point SSC5700 included in delivery

SF-210290V-C160C190: Ordering and Part No. 02885394

- Vertical stand
- First choice for Bifix reamers
- 2 clocks
- Maximum tool Ø: 210 mm
- Maximum tool length: 290 mm
- Additional Ø 57 mm spring centre for HSK 63/80/100 and Capto C8

Centre point SSC5700 included in delivery

Single clock fixtures large capacity

SF-210740-C160: Ordering and Part No. 02885385

- Horizontal stand
- First choice for long Xfix reamers
- 1 clock
- Maximum tool \varnothing : 210 mm
- Maximum tool length: 740 mm
- Additional \varnothing 57 mm spring centre for HSK 63/80/100 and Capto C8

Centre point SSC5700 included in delivery

SF-210690V-C160: Ordering and Part No. 02885387

- Vertical stand
- First choice for long Xfix reamers
- 1 clock
- Maximum tool \varnothing : 210 mm
- Maximum tool length: 690 mm
- Additional \varnothing 57 mm spring centre for HSK 63/80/100 and Capto C8

Centre point SSC5700 included in delivery

Dual clock fixtures large capacity

SF-210740-C160C190: Ordering and Part No. 02885388

- Horizontal stand
- First choice for long Bifix reamers
- 2 clocks
- Maximum tool \varnothing : 210 mm
- Maximum tool length: 740 mm
- Additional \varnothing 57 mm spring centre for HSK 63/80/100 and Capto C8

Centre point SSC5700 included in delivery

SF-210690V-C160C190: Ordering and Part No. 02885390

- Vertical stand
- First choice for long Bifix reamers
- 2 clocks
- Maximum tool \varnothing : 210 mm
- Maximum tool length: 690 mm
- Additional \varnothing 57 mm spring centre for HSK 63/80/100 and Capto C8

Centre point SSC5700 included in delivery

Compact setting fixtures

SF-60200-C160: Ordering and Part No. 02885395

- Horizontal stand
- First choice for \varnothing smaller than 60 mm
- 1 clock
- Maximum tool \varnothing : 60,5 mm
- Maximum tool length: 200 mm

SF-60200-C160C190: Ordering and Part No. 02885396

- Horizontal stand
- First choice for \varnothing smaller than 60 mm
- 2 clocks
- Maximum tool \varnothing : 60,5 mm
- Maximum tool length: 200 mm

Additional measuring arms

SFB-60: Ordering and Part No. 02208619

- Measuring arm 60°
- Dial gauge included in delivery
- Measuring point not included, see page 384

SFB-60 WC: Ordering and Part No. 02885754

- Measuring arm 60°
- Dial gauge not included in delivery
- Measuring point not included, see page 384

SFB-90: Ordering and Part No. 02208622

- Measuring arm 90°
- Dial gauge included in delivery
- Measuring point not included, see page 384

SFB-90 WC: Ordering and Part No. 02885755

- Measuring arm 90°
- Dial gauge not included in delivery
- Measuring point not included, see page 384

DG-1: Ordering and Part No. 75079579

- Dial gauge , 1 μm

Examples of multi clocks setting fixture assembly

Accessories

SMES-406: Ordering and Part No. 02819156

- Measuring point for Xfix reamers
- Ø 4mm
- Carbide tipped

SMES-900: Ordering and Part No. 02208610

- Measuring point for Bifix & Precifix reamers
- Carbide tipped

SMES-909: Ordering and Part No. 02208613

- Measuring point for Bifix & Precifix reamers
- Carbide tipped
- 9 mm offset

SMES-915: Ordering and Part No. 02208616

- Measuring point for Bifix & Precifix reamers
- Carbide tipped
- 15 mm offset

SFHS-20: Ordering and Part No. 02884025

- Hand-screw
- Suitable for the entire setting fixture range

SFVST- 100: Ordering and Part No. 02884026

- Steel stand (set of 3)
- Ø 100 mm
- Suitable to convert horizontal setting fixture to vertical position

Centre points

SFC-2000HM: Ordering and Part No. 02884023

- Solid carbide fixed centre point
- Ø 20 mm
- Suitable for Xfix, Precifix and Bifix range standard and special
- To be used at front end of the tool

SSC-3400: Ordering and Part No. 02208617

- Spring centre point
- Ø 34 mm
- Suitable for Xfix, Precifix and Bifix range standard and special
- To be used at back end of the tool
- Not suitable for HSK63/80/100 and capto C8

SSC5700: Ordering and Part No. 02208620

- Spring centre point
- Truncated Ø 57 mm
- Suitable for Xfix, Precifix and Bifix range standard and special
- To be used at back end of the tool
- Suitable for HSK63/80/100 and capto C8

Overview Rough boring heads

Graflex®

Seco-Capto™

Symmetrical boring:
2 standard type A insert holders

Staggered boring:
1 extended type B and 1 standard type A insert holders

Features

Rough boring heads for bores \varnothing 18 to 205 mm

8 rough boring heads EPB 750 with Graflex® connection for bores \varnothing 18 to 205 mm

5 rough boring heads EPB 750 with Seco-Capto™ connection for bores \varnothing 39 to 205 mm

Note: The minimum bore size of the smallest Seco-Capto™ rough boring head is \varnothing 39 mm with the smallest available Seco-Capto™ C3 connection.

For \varnothing 18 to 40 mm use Graflex® boring heads with connection sizes G0 to G2 in conjunction with the appropriate Seco-Capto™/Graflex® adaptor.

This offers also boring length modularity when using additional Graflex® extensions.

Seco-Capto™ adapter and Graflex® head: \varnothing 18 to 40 mm

Note: Features, Instructions (insert holder fitting, diameter setting, back boring instructions, troubleshooting, recommended machining conditions, maximum speeds), **suitable insert holders and suitable inserts** are similar for both types of EPB 750 rough boring heads of similar boring capacity size, regardless of connection type.

Features

A rough boring head assembly is a combination of 1 body (head) and 2 insert holders.

Simultaneous or independent adjustments of the insert holders are possible:

Simultaneous adjustment by the insert holders coupling mechanism (no coupling mechanism in the smallest head \varnothing 18 to 24 mm).

Each adjusting screw moves both insert holders simultaneously (they are gear coupled).

Diameter adjustment is possible without a presetter (1 increment = 0,1 mm on the diameter).

Independent adjustment is also possible: disengage the coupling mechanism so that each adjusting screw acts only on its insert holder.

Simultaneous adjustment

Independent adjustment

Symmetrical boring:

Symmetrical boring means both cutting edges are set on the same diameter: It requires two identical type A standard insert holders (with identical lead angle).

Staggered boring:

Staggered boring means one cutting edge is offset as a leading cutting edge operating on a smaller diameter than the second edge set on the diameter to be realised: It requires one type A standard insert holder and one type B extended insert holder, achieving the required (+) axial offset.

90° or 80° lead angle insert holders

A75...CC... and A75...CP... insert holders have a 90° lead angle for rhombic inserts: mostly suitable for blind holes and requiring less spindle torque.

A75...SC... insert holders have an 80° lead angle for square inserts: mostly suitable for through holes and heavy duty.

Angular orientation of the cutting edges according to ISO.

CC, CP, SC or CN type insert holders

A750...CC..., A750...CP... and A750...SC... insert holders are with 0° rake angle (GAMO) and 0° inclination angle (LAMS).

A750...CN... insert holders are with -6° rake angle (GAMO) and -6° inclination angle (LAMS), allowing use of 'negative' CNMM inserts and particularly multi-edges CNMG inserts with 4 cutting edges. In this case, it is particularly important to select the recommended CN inserts and to respect the recommended cutting data (see page 475). Using other inserts, e.g. with smaller effective cutting angle, and/or incorrect cutting data, could result in high cutting stresses and machine / workpiece damage.

GAMO

LAMS

EPB 750 – Rough boring heads

Seco-Capto™

- Symmetrical and staggered boring is possible
- Simultaneous adjustment by insert holders coupling mechanism

Instructions

Recommended machining conditions

Spindle power:

As rough boring requires high machine power, we recommend to check that the machine is suitable. Staggered boring is a solution to reduce the power needs, as the feed is divided by two for the same total depth of cut, compared to symmetrical setting.

Optimum performance is obtained with through coolant (higher machining data, better surface finish, better chip evacuation, longer insert life).

For detailed user instructions, please refer to the operating instructions supplied as part of the delivery content of the boring heads and with the Steadyliner® bars.

These operating instructions can also be downloaded from www.secotools.com.

Maximum speeds for rough boring heads

Head	Capacity \varnothing mm	Max. RPM	Implied max cutting speed v_c at min. Cap.	Implied max cutting speed v_c at max. Cap.
Rough boring heads (with two identical insert holders set symmetrically), with Graflex® connection				
A750 00	18-24	15000	848	1131
A750 10	23-31	12000	867	1169
A750 20	30-40	9500	895	1194
A750 30	39-51	7500	919	1202
A750 40	50-65	5700	895	1164
A750 50	64-86	4500	905	1216
A750 60	85-115	3500	935	1264
	114-144	2700	967	1221
A750 70	114-160	2500	895	1257
	159-205	2000	999	1288
Rough boring heads (with two identical insert holders set symmetrically), with Seco-Capto™ connection				
C3-391.0750-30	39-51	7500	919	1202
C4-391.0750-40	50-65	5700	895	1164
C5-391.0750-50	64-86	4500	905	1216
C6-391.0750-60	85-115	3500	935	1264
	114-144	2700	967	1221
C8-391.0750-70	114-160	2500	895	1257
	159-205	2000	999	1288

Note: The maximum speeds are related to the boring head's mechanical design and balancing quality. Speeds inside these limits have to be chosen in regard to the other machining conditions, e.g. workpiece material, cutting edge (insert), tooling length, machine spindle. At speeds from approx. 8000 RPM and above, the basic holders and the extensions/reducers should be fine balanced.

Instructions Troubleshooting

Position	Possible cause	Solution
Poor chip control	Feed rate too low	Increase feed rate
	Excessive DOC	Use staggered method
Chatter & Vibrations	Excessive speed	Reduce cutting speed, not feed
	Extreme L/D ratio	Shorten tool to increase stiffness
		Increase holding arbor's and intermediate's OD
		Use Steadyline bar
		Use carbide or heavy metal extensions
	Too large insert radius	Use insert with smaller radius
	Unstable workpiece	Improve fixture and clamping support
Lead angle κ is 80°	Change to $\kappa=90^\circ$, type CC insert	
Insert chipping or breaking	Wrong insert	Change to tougher grade of insert
		Use larger radius if available
	Severe interrupted cut	Decrease speed, decrease feed
	Chips packing and re-cutting	Check for boring bar/bore diameter clearance
Improve chip control, increase feed		
Poor tool life	Wrong insert	Change to higher wear resistant grade
	Excessive cutting speed	Reduce speed
	Insert chipping	Check DOC and feed rate
	Too low coolant pressure	Increase coolant pressure
Chips not evacuating	Boring assembly too large	Reduce to a smaller head with extended insert holders when possible
	Excessive DOC	Use staggered method; prefer CC.. instead of CN.. inserts (particularly when using the boring head at its small diameters).
	Inadequate space below bore	Set the workpiece higher onto the table
	Poor chip control	See above
Insufficient machine power	Excessive feed rate	Reduce feed (not less than 25% of insert radius)
	Excessive DOC	Use staggered method
	Low machine power	RPM in area of low spindle torque: increase speed
		RPM in area of gear change: adjust RPM
		Change insert to higher rake angle (to HSS in extreme cases)
Reduce DOC		
Excessive hole exit burr	Excessive feed rate	Reduce feed
	CC type insert holders 90°	Use 80° square insert holder
	Cutting forces too high	Reduce DOC
		Reduce insert radius

EPB 610 Rough boring heads – Guide

Features

A rough boring head assembly is a combination of 1 body (head) and 2 insert holders

- Achieving geometrical hole precision starting from cast, flame cut or drilled hole
- Minimised unbalance thanks to a symmetrical design

Compact

- Short body to maximise the rigidity of the boring assembly and to deliver the best damping performances when used on Steadyline® turning and boring bars
- Reduced weight for fast tool changing and spindle acceleration

Intuitive and fast setting

- Each insert holder features its push and pull setting mechanism allowing easy and fast setting of the diameter, using a pre-setter
- Diameter scales roughly visualise the insert holders positions

Insert holders

- A610...CC... insert holders achieve a 90° lead angle for rhombic inserts, 0° rake angle and 0° inclination angle
- The insert holders are suitable for both EPB 610 Graflex® and EPB 610 GL heads

Productivity

- High rigidity resulting from a tight fitting of the insert holders into the head's body, and large clamping screws
- Possibility to take a depth of cut a_p up to half of the insert's width, maximising the chip removal rate and allowing a total exploitation of the inserts
- Staggered boring using a shim (part of heads delivery contents) to offset one insert holder in order to increase or to split the radial depth of cut
- Through coolant delivery directed towards the cutting edges

Product range

- EPB 610 rough boring heads are available with Graflex®, GL and BA machine side connections

EPB 610 Graflex®

- Graflex®: 4 compact rough boring heads for \varnothing 39 to 115 mm
- The flexible Graflex® modular System allows to build up optimal boring assemblies from Graflex® adapters, intermediate modules and boring heads

EPB 610 GL and BA, for Steadyline® vibration damping bars

- GL: 3 short and compact rough boring heads, for \varnothing 36 to 69 mm
- BA: 2 short and compact rough boring heads, for \varnothing 66 to 116 mm
- Particularly adapted to the Steadyline® turning and boring bars. Boring performances, when used on long Steadyline® GL bars, are similar to non-damped shorter assemblies (<6xD).

GL

BA

EPB 610 Rough boring heads – Guide

SETTING

Symmetrical boring:

Symmetrical boring means both cutting edges are set on the same diameter and same height.

Staggered boring:

Staggered boring means one cutting edge is offset as a leading cutting edge (entering the bore first), operating on a smaller diameter than the second edge set on the diameter to be realised: It requires a shim (part of the head delivery content) to be fitted between the boring head's body and one insert holder to achieve the (+) axial offset, see table below.

Shims thicknesses

Shim Part No.	Thickness (mm)
AU6103003	0,4
AU6104003	0,5
AU6105003	0,6
AU6106003	0,6

EPB 610 Graflex® – Rough boring heads

Graflex®

- Symmetrical and staggered boring modes are possible
- Individual insert holder adjusting mechanism
- Internal coolant supply towards cutting edge

Please check availability in current price and stock-list
 For rough boring recommended inserts, see page(s) 474-475
 Note: A key for insert screw clamping is part of EPB 610 heads delivery contents.

EPB 610 Rough boring heads – Instructions

Recommended tightening torques. Maximum feed per rev. when staggered

EPB 610 boring heads size	30	40	50	60
Tightening torque of clamp screws for insert holders clamping (N.m)	2 x 25	4 x 25	4 x 40	4 x 40
f Max. feed rate when staggered boring (mm/rev)	0,4	0,5	0,6	0,6

Recommended machining conditions

Spindle power:

As rough boring requires high machine power, we recommend to check that the machine is suitable. Staggered boring is a solution to reduce the power needs, as the feed is divided by two for the same total depth of cut, compared to symmetrical setting. Optimum performance is obtained with through coolant (higher machining data, better surface finish, better chip evacuation, longer insert life).

For detailed user instructions, please refer to the operating instructions supplied as part of the delivery content of the boring heads and with the Steadyline® bars. These operating instructions can also be downloaded from www.secotools.com.

Maximum speeds for EPB 610 rough boring heads

Note: The maximum speeds shown in boring heads Product pages are related to the boring head's mechanical design and balancing quality. Speeds inside these limits have to be chosen in regard to the other machining conditions, e.g. workpiece material, cutting edge (insert), tooling length, machine spindle.

By boring applications with Steadyline® bars, make sure not to overpass the max. RPM of the bars : See the Operating instructions supplied with the Steadyline® turning and boring bars.

Interrupted cut boring

Boring

Overview

Axiabore™ type fine boring heads for bores \varnothing 0,3 to 108 mm

An Axiabore™ type head is an assembly of a body (head) and a tool.

Axiabore™ type head selection

	Capacity	HSM/ Max speeds	Hole geometry	Cost effective	Multipurpose
Nanobore™ A760 01	\varnothing 0,3-8	30000 RPM	■ ■	■ ■	
Axiabore™ A760 02	\varnothing 2-20	12000 RPM	■	■ ■	
Axiabore™ C3-931.0760-02	\varnothing 2-20	12000 RPM	■	■ ■	
Axialibrabore™ A760 12	\varnothing 2-20	24000 RPM or 1500 m/min	■ ■	■	
Axiabore™ Plus - A760 03	\varnothing 6-108	8000* RPM or 1000 m/min	■	■ ■ ■ ■	■ ■ ■ ■
Axiabore™ Plus C5-391.0760-03	\varnothing 6-108	8000* RPM	■	■ ■ ■ ■	■ ■ ■ ■
Axialibrabore™ Plus - A760 13	\varnothing 6-33	20000 RPM or 1500 m/min	■ ■	■	

Axiabore™ type heads exists with Graflex® or Seco-Capto™ connection:

5 Axiabore™ fine boring heads EPB 760 with Graflex® connection for bores \varnothing 0,3 to 108 mm:

- Nanobore™ A760 01
- Axiabore™ A760 02
- Axialibrabore™ A760 12
- Axiabore™ Plus - A760 03
- Axialibrabore™ Plus - A760 13

2 Axiabore™ fine boring heads EPB 760 with Seco-Capto™ connection for bores \varnothing 2 to 108 mm:

- Axiabore™ C3-391.0760-02
- Axiabore™ Plus- C5-391.0760-03

Note: The minimum bore size of the smallest Seco-Capto™ fine boring head is \varnothing 2 mm with the smallest available Seco-Capto™ C3 connection. For \varnothing 0,3 to 8 mm use Nanobore™ head with connection size G2 in conjunction with the appropriate Seco-Capto™/Graflex® adapter.

Seco-Capto™ adapter and Graflex® head: \varnothing 0,3 to 8 mm

Note: Features, Instructions (tool fitting procedure, diameter setting, MPA assembly procedure, maximum speeds, recommended cutting speeds, troubleshooting), **suitable tools and insert holders** are similar for both types of EPB 760 fine boring heads of similar boring capacity size, regardless of connection type.

Boring tools

Note: In the Product pages, it is clearly mentioned which tools are suitable for which heads.

Boring tools, solid carbide (shank \varnothing 4 mm) for the smallest diameters (\varnothing 0,3 to 6,2 mm), lead angle 98°. Require reduction bushes to fit into Nanobore™ and Axia(libra)bore™ heads. The tools have an angled machine side for cutting edge orientation according to ISO.

Boring bars, insert type (shanks \varnothing 6, 12 or 16 mm) for \varnothing 6 to 13 mm, 'steel' type for short tools, 'carbide' type for long tools. For WB..0301.. or CC..0602.. inserts and 90° lead angle.

Direct fitting into the heads. The locking flat achieves a cutting edge orientation according to ISO.

Boring bars, modular composed of a 'shank' and an 'insert holder' for \varnothing 13 to 63 mm.

Shanks (\varnothing 12 or 16 mm) in 'steel' for short, 'carbide' for long and 'Lightweight / aluminium' for the largest diameters. Direct fitting into the heads.

Six insert holders for CC..0602.. inserts and 90° lead angle, compatible with all shanks to build up a wide boring capacity on a common shank.

Multi-purpose adapter (MPA)

MPA for boring and OD-overturning, as well as face grooving on the - Axiabore™ Plus - head.

The MPA and tools have a serrated interface, for precise orientation and positioning increments (2,5 mm on diameter).

Directional through coolant nozzle included.

Select the components to build up an MPA type tool on the MPA tool selection charts. See assembly details in the Instructions chapter.

Set up a Boring or OD-overturning assembly.

Boring and OD-overturning assemblies use the same shank equipped with an insert holder, and a counterweight.

Boring assembly: Select the appropriate insert holder to be assembled onto the boring/OD-overturning shank, using the selection chart 'Boring with MPA' (part of following Product pages).

OD-overturning assembly: Select the appropriate insert holder to be assembled onto the boring/OD-overturning shank, using the selection chart 'OD-overturning with MPA' (part of following Product pages). See assembly details in the Instructions chapter.

Building a grooving assembly

A grooving assembly requires:

- a pair of grooving tool holders (one E='External' and one I='Internal'),
- one grooving tool 'against Spigot' or 'against Bore'.

When the groove is not against a spigot wall nor against a bore wall, both tool types are suitable.

See the selection charts 'Grooving tool for grooving with MPA'.

Features

<p>Nanobore™ head Part No. A76001</p> 	<p>Ultra small head for fine boring \varnothing 0,3 – 8 mm: External diameter 25 mm, length 25 mm, with Graflex® connection size G2, tool fitting \varnothing 6 mm. Operating speeds up to 30 000 RPM allows performance machining of very small diameters.</p> <p>The reduction bush (6-4 mm) with orientation flat and pin for fitting the solid boring tools is part of the head delivery content.</p>
<p>Axiabore™ head Part No. A76002 and C3-391.0760-02</p>  	<p>Small heads for fine boring \varnothing 2 – 20 mm: External diameter 36,5 mm, length 32 mm, with Graflex® connection size G3 and Seco-Capto™ connection size C3, tool fitting \varnothing 12 mm. These heads sizes are optimised for difficult-to-access bores.</p> <p>The reduction bush (12-4 mm) with orientation flat and pin for fitting the solid boring tools is part of the head delivery content. Note: Smaller tools from Nanobore™ (0,3 to 2,1 mm) can also be fitted, but the machining speed will be limited to 12000 RPM: Nanobore® head should be preferred.</p>
<p>Axialibrabore™ head Part No. A76012</p> 	<p>Small balanceable head for fine boring \varnothing 2 – 20 mm: Same features as the Axiabore™ head, but with fine balancing (body length 50 mm). With Graflex® connection size G3.</p> <p>Fine balanceable heads allow higher speeds up to 24 000 RPM or 1500 m/min (whichever is reached first without exceeding either of them), improve the hole geometry and reduce the machine spindle stress. 'LibraOne' balancing is performed by setting the graduated balancing ring (in accordance with the balancing code of the tool used, and the diameter to be bored) in line with the mark on the boring head. No chart needed.</p>

Features

Axiabore™ Plus - head
Part No. A76003 and C5-391.0760-03

Multi-purpose heads for fine boring \varnothing 6 to 108 mm, OD-overturning \varnothing 2 to 57 mm and grooving \varnothing 19 to 96 mm:

External diameter 54 mm, length 45 mm, with Graflex® connection size 5 and Seco-Capto™ connection size 5, tool fitting \varnothing 16 mm.

Suitable tools: all tools with shank \varnothing 16 mm, for direct fitting into the heads.

This head has also been designed to be equipped with the MPA (multi-purpose adapter), to perform large diameter fine boring, OD-overturning and face grooving.

Axialibrabore™ Plus - head
Part No. A76013

Balanceable head for fine boring \varnothing 6 to 33 mm:

Same features as the - Axiabore™ Plus - head, but with fine balancing (body length 65 mm). With Graflex® connection size G5.

Fine balanceable heads allow higher speeds up to 20 000 RPM or 1500 m/min (whichever is reached first without exceeding either of them), improve the hole geometry and reduce the machine spindle stress. 'LibraOne' balancing is performed by setting the graduated balancing ring in line with the mark on the boring head (balancing code of the tool used, and the diameter to be bored). No chart needed.

Fine balancing is only possible for the smallest boring tools (\varnothing 6 to 33 mm).

Note: if using a larger 'Alu', or a 'MPA' tool from the - Axiabore™ Plus - onto the - Axialibrabore™ Plus - head, fine balancing is not possible and the balancing ring should be set in the head's pre-balancing position (depending on the operation to be performed, see Instructions chapter). The maximum speed becomes the same as for the - Axiabore™ Plus.

EPB 760 – Axiabore™ type heads, balanceable

Graflex®

- LibraOne built-in balancing system based on a single balancing setting ring
- With micrometric adjusting (increment 0,01 mm and vernier 2,5 µm, on the diameter)

For larger diameters, see Multi-purpose adapter (MPA) section.

* When used on A760 13, no fine balancing possible.

Multi-purpose adapter (MPA), for EPB 760 heads

- Suitable for - Axiabore™ Plus - A760 03 head only*
- Designed to hold a shank and a counterweight (for boring or OD-overturning) or two grooving tool holders (for face grooving)
- Through coolant with an adjustable nozzle (3)

Capacity DCN-DCX Ø mm			Ordering and Product No.	Designation	Dimensions in mm				KG
For boring Ø (mm)	For OD-overturning Ø (mm)	For grooving Ø (mm)			HTB	DMM	WB	LF	
53,0-108,0	2,0-57,0	31,0-96,0	02595014	BDA16BS25100	25,0	16,0	100,0	16,0	0,28

*When used on an - Axialibrabore™ Plus - A760 13 head, no fine balancing possible, see page(s) 416.
 Select the required components to realise boring, OD-overturning or grooving assemblies, using following page(s) 429-434.

Selection chart: Boring tools and insert holders suitable for EPB 760 heads

Select a suitable insert holder, and note the shank position on the MPA to obtain the required bore capacity.
 Note: A OD-overturning assembly requires :
 - an - Axiabore™ Plus - head (A760 03)
 - a MPA (BDA16BS25100)
 - a shank (BAS25MH1660)
 - a counterweight (BAS25CW1660).
 - an insert holder (A765R.) to be selected in the chart
 - an insert

 Detailed description of insert holders, see page(s) 423.

Selection chart: Insert holders for OD-overturning with MPA, for EPB 760 heads

Select a suitable insert holder, and note the shank position on the MPA to obtain the required bore capacity.
 Note: A OD-overturning assembly requires :
 - an - Axiabore™ Plus - head (A760 03)
 - a MPA (BDA16BS25100)
 - a shank (BAS25MH1660)
 - a counterweight (BAS25CW1660).
 - an insert holder (A765R.) to be selected in the chart
 - an insert

Select the suitable grooving tool, and note the grooving tool holder position on the MPA to obtain the required groove capacity.

Note : An -against bore- grooving assembly requires :

- an -Axiabore™ Plus - head (A760 03)
- a MPA (BDA16BS25100)
- an I (internal position) and an E (external position) grooving tool holder (BAS25FGI35 and BAS25FGE35) to either hold a grooving tool or act as a counterweight (see setting position in the chart)
- an -against bore- grooving tool (AFG...82) to be selected from the chart, related to groove width and diameter.

* +0,2 mm complementary capacity achievable. ** Recommended values in bold.
Detailed description of the grooving tools, see page(s) 428.

Detailed description of the grooving tools, see page(s) 428.

Instructions – Maximum speeds for Axiabore™ type heads

For further application details refer to the operating instructions supplied with the boring heads and with the GL bars.

Head	Capacity mm	Max. RPM with tool (RPM)	Max. RPM with MPA (RPM)	Max. cutting speed v_c at min. Cap. (m/min)	Max. cutting speed v_c at max. Cap. (m/min)
Axiabore™ type with Graflex® connection					
A76001	0,3 – 8	30000	-	28*	754*
A76002	2 – 20	12000	-	75*	754*
A76003	6 – 108	8000**	5000	151*	1000***
A76012	2 – 20	24000**	-	151*	1500***
A76013	6 – 33	20000**	5000	377*	1500***
Axiabore™ type with Seco-Capto™ connection					
C3-391.0760-02	2-20	12000	-	75*	754*
C5-391.0760-03	6-108	8000**	5000	151*	1000**

Note: The maximum speeds are related to the boring head's mechanical design and balancing quality. Speeds inside these limits have to be chosen in regard to the other machining conditions, e.g. workpiece material, cutting edge (tools and inserts), tooling length, machine spindle. At speeds from approx. 8000 RPM and above, the holding arbors and intermediates should be fine balanced. Using balanceable heads and fine balanced holders improves the tool life and the boring performances even at lower speeds.

* Implied max. cutting speed with max. RPM.

** Not reachable with all tools, see ***.

*** Max. cutting speed not to be exceeded.

Troubleshooting

Problem	Possible cause	Solution
Poor tool life	Wrong insert grade	Change to more wear resistant grade
	Excessive cutting speed	Reduce cutting speed
	Excessive DOC	Decrease DOC
Chatter & Vibrations	Excessive cutting speed	Reduce cutting speed
	High L/D ratio	Shorten tool to increase stiffness
		Use stronger boring tool
		Use Steadyline bar
		Use carbide or heavy metal extensions
	Wrong insert	Reduce nose radius of insert
Use ground geometry inserts		
Incorrect stock allowance	Change pre-hole diameter	
Poor hole diameter tolerance & repeatability	Inaccurate tool changes	Worn and damaged tool shank: replace
		Clean spindle and tool shank
	Variation of stock allowance	Add semi-finishing boring step
	Low spindle stability	Use sharper ground geometry inserts
Poor roundness	Excessive boring tool imbalance	Check the spindle runout
		Change to LIBRAFLEX® boring head
		Check balance ring setting
		Reduce speed
	Excessive cutting forces	Check stock allowance and feed rate
	Insufficient workpiece clamping	Check for uniform workpiece clamping
	Workpiece non-symmetrical	Reduce cutting forces, change to ground insert
		Increase cutting speed, reduce feed
Poor positional tolerance	Original bore misaligned	Add a semi-finishing boring step
	Excessive DOC	Decrease DOC, make two passes
Poor surface finish	Wrong insert radius	Use larger insert radius
	Excessive feed rate	Reduce feed to be max. 30% of insert nose radius
	Poor chip evacuation	Apply through coolant
		Change insert to higher rake angle (HSS: please enquire)
		Check DOC
Tapered bore	Premature tool wear	Change to more wear resistant grade
		Modify cutting speed
		Increase coolant flow

Troubleshooting advice is also valid for the fine boring heads, radial type.

Fine boring heads – Overview

Graflex®

Graflex® balanceable

Seco-Capto™

GL connection

BA connection

Features

A radial type fine boring head is an assembly of a body (head) and an insert holder. EPB 620, EPB 780 and EPB 790 radial, fine boring heads feature:

- Micrometric adjustment: Insert holder setting mechanism with a micrometric adjusting screw (1 increment = 0,01 mm on the diameter) and a vernier scale (resolution of 2,5 μm on the diameter)
- The precision of the mechanism guarantees repeatable accuracy
- Angular orientation of the cutting edge according to DIN 69871/ISO 7388 for SA and ISO 12164 for HSK
- Coolant through the head directed towards the cutting edge
- EPB 780 and EPB 620 boring heads are pre-balanced on median diameter setting. EPB 790 are balanceable, for optimized performance.

Note: Features, Instructions (insert holder fitting, diameter setting, back boring instructions, troubleshooting, recommended machining conditions, maximum speeds), **suitable insert holders and suitable** inserts are identical for all types of EPB 620, EPB 780 and EPB 790 fine boring heads of similar boring capacity size, regardless of their machine side connection types.

Product range

Seco offers a variety of radial fine boring heads to fulfill all your needs with the most suitable solution:

EPB 620 Fine boring heads, radial types, for Steadyline® vibration damping bars

- 3 fine boring heads with GL machine side connection for fine boring \varnothing 34 to 69 mm.
- 2 fine boring heads with BA machine side connection for fine boring \varnothing 66 to 116 mm.

Their compact design achieves best damping performances when used on Steadyline® GL turning and boring bars.

EPB 780 Fine boring heads, radial types

9 precision boring heads with Graflex® machine side connection for fine boring $\varnothing 15$ to 205 using radially fitted insert holders.

5 precision boring heads with Seco-Capto™ machine side connection for fine boring $\varnothing 39$ to 205 mm."

Seco-Capto™ adapter and Graflex® head: 15-40 mm

Note: The minimum bore size of the smallest Seco-Capto™ fine boring head is $\varnothing 39$ mm with the smallest available Seco-Capto™ C3 connection. For $\varnothing 15$ -40 mm use Graflex® boring heads with connection sizes G0 to G2 in conjunction with the appropriate Seco-Capto™/Graflex® adaptor. This offers also boring length modularity when using additional Graflex® extensions.

Note: Features, Instructions (insert holder fitting, diameter setting, back boring instructions, troubleshooting, recommended machining conditions, maximum speeds), suitable insert holders and suitable inserts are similar for both types of EPB 780 fine boring heads of similar boring capacity size, regardless of connection type.

EPB 790 Balanceable fine boring heads, radial type

5 balanceable 'Libraflex®' boring heads with Graflex® machine side connection for fine boring $\varnothing 30$ to 115 mm, at high speeds (up to 1500 m/min), using radially fitted insert holders.

Balancing reduces spindle stress, cutting parameters can be optimized, better machining qualities are achieved even at conventional speeds. Balancing is performed by setting both graduated rings in accordance with the diameter to be bored (no chart needed).

Features

Insert holders

A radial type fine boring head is an assembly of a body (head) and an insert holder.

The wide range of fine boring, chamfering and back boring insert holders are suitable for EPB 620, EPB 780 and EPB 790 fine boring heads, radial types.

Fine boring insert holders

EPB 782: lead angle 90° for WB inserts

EPB 724: lead angle 90° for TC inserts

EPB 725: lead angle 90° for CC inserts

EPB 726: lead angle 95° for CC inserts

Note: 95° lead angle insert holders should be used to avoid face contact when boring up a shoulder.

Chamfering insert holders, 23 to 160 mm

EPB 729: available with a 15°, 30° or 45° lead angle for CC inserts.

Libraflex® balancing can also be achieved when using chamfering insert holders.

Back-boring insert holders, 26,5 to 164 mm

EPB A789: lead angle 90° for WB and CC inserts..

Libraflex® balancing is not possible when using back-boring insert holders. In this case, the highest unbalance reduction is obtained when both balancing rings are set on their largest graduation.

Insert holders, for fine boring heads EPB 620/ 780/ 790

For spare insert screws and spare insert keys, see page(s) 479 *The fine back boring insert holders delivery content includes a specific insert holder clamp screw, to be used instead the standard clamp screw delivered with the boring heads.

Recommended machining conditions

For further application details refer to the operating instructions supplied with the boring heads and with the GL bars.

Maximum speeds for fine boring heads, radial type

The maximum speeds shown in boring heads Product pages are related to the boring head's mechanical design and balancing quality. Speeds inside these limits have to be chosen in regard to the other machining conditions, e.g. workpiece material, cutting edge (insert), tooling length, machine spindle.

By boring applications with Steadyline® bars, make sure not to overpass the max. RPM of the bars: See the Operating instructions supplied with the Steadyline® bars.

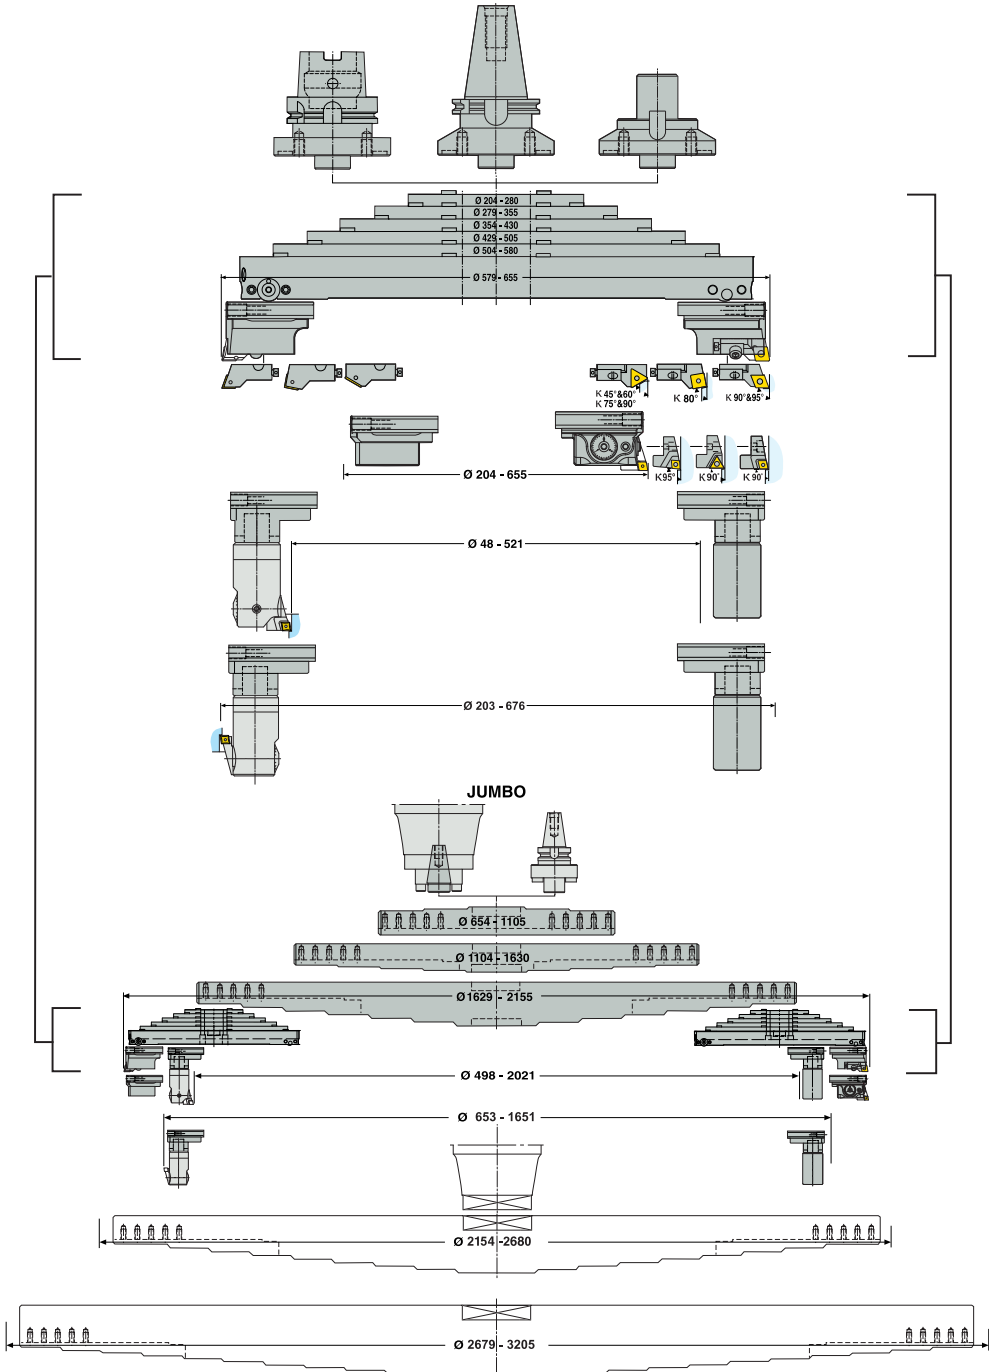

Below max. RPM are for boring heads equipped with boring insert holders or chamfering insert holders. When using back boring insert holders on holders on EPB 620, EPB 790 or EPB 780 heads type heads, use max. rpm for A780.. type, similar size.

Head	Capacity \varnothing mm	Max. RPM	Implied max cutting speed v_c at min. Cap.	Implied max cutting speed v_c at max. Cap.

Note: The maximum speeds are related to the boring head's mechanical design and balancing quality. Speeds inside these limits have to be chosen in regard to the other machining conditions, e.g. workpiece material, cutting edge (insert), tooling length, machine spindle. At speeds from approx. 8000 RPM and above, the basic holders and the extensions/reducers should be fine balanced.

Overview

Features

5 Jumbo Bridge bars for boring \varnothing 654 to 3205 mm (also OD-overturning \varnothing 498 to 3071 mm and back-boring \varnothing 653 to 3226 mm).

Jumbo Bridge bars made of high tensile aluminium with spindle steel interfaces, are designed to hold two classic Bridge bars in several positions.

Sizes A731S001, 002, 003 are delivered with 4 locking screws to be fitted onto a milling cutter holder, flange mounting Type 569, spigot \varnothing 60 mm - or to be fitted directly onto the machine spindle (DIN 2079/50 workpiece side), using the centering spigot shown in accessories.

Jumbo Bridge bars are delivered with two lifting rings.

Sizes A731S004-...* and A731S005-...* are available on request, with standard or specific spindle fitting possibilities, according to the machine:

Capacity DCN-DCX \varnothing mm	Designation	Dimensions in mm (see drawing on Product page)							
		DCB	LF	HTB	LB	CBDP	WB	DCON	
2154-2680	A731S004-...*	*	70	300	160	*	2140	*	*
2679-3205	A731S005-...*	*	110	400	200	*	2665	*	*

* designation code and dimensions will be completed related to the spindle fitting type.

Main new features

The new Jumbo Bridge bars 'S' feature through coolant channels to feed the coolant from the holder or the flange mount towards the two standard Bridge bars, and have a complementary locking screw of the standard Bridge bars.

Note: These new Jumbo Bridge bars 'S' can hold all classic Bridge bars (the new 'S', or the previous ones): when using the previous ones, the complementary clamping screw cannot be used. Through coolant to the cutting edge is only possible when using 'S' Jumbo Bridge bars and 'S' standard Bridge bars.

In order to keep balance, do not mix new and previous standard Bridge Bars and blocks on the same Jumbo Bridge bar.

Features

6 Bridge bars for boring \varnothing 204 to 655 mm (also OD-overturning \varnothing 48 to 521 mm and back-boring)

Bridge bars have a machine side connection \varnothing 130 mm for direct fitting onto arbors for Bridge bars (SA and HSK) or onto the Graflex® adapter. When using the Graflex® adapter, extensions are possible as well as spindle flange clamping, see Graflex® modular system. Angular position of the Bridge bar every 30° onto the arbors or Graflex® adapter, for optimized magazine storage.

Bridge bars can hold rough, fine, counterweight or Graflex® boring blocks.

The boring blocks are locked onto the Bridge bar by means of two cylinders actuated by three clamping screws: One of the clamping screws has a stop disc, which limits the block's sliding stroke inside its setting capacity and stops the block from sliding out of the Bridge bar. Precise and step free block sliding for diameter adjustment (38 mm stroke on radius), using the block's adjusting screw which is linked to the retaining pin of the Bridge bar.

Coolant through the Bridge bars and the boring blocks, towards the cutting edges.

Max RPM, see page 468.

Note: These new Bridge bars (Part No. A731S 0_0) cannot hold previous types of boring blocks (Part No. A731 _00 -without S-).

For the Bridge bar and Jumbo Bridge bar selection, related to the boring, OD-overturning or back-boring diameter to be produced, see Bridge bar selection charts, pages 457-462.

Features

Rough boring block

A large twin rough boring head requires two rough boring blocks, each equipped with a cartridge. Rough boring block through coolant, towards the cutting edge.

Cartridges

A large range of cartridges is available:

- Cartridges with 90° lead angle, recommended in most of the boring applications for a lower power consumption,
- Cartridges with 80° lead angle, recommended for through hole boring (and chamfering), particularly in cast iron to avoid exit failure.

The power consumption is higher.

- Other cartridges with ISO5611/h1 = 16 mm fitting interface are suitable.

Note: The two cartridges can be set on the same diameter (symmetrical boring) or in a staggered position (staggered boring).

A cartridge raising

corner shim is available as an accessory (Part No. 18LS0316).

Assembling and setting procedures, see Instructions pages.

Fine boring block and counterweight block

A large fine boring head requires one fine boring block equipped with an insert holder and one counterweight block.

Diameter setting mechanism of the fine boring block with a micrometric setting screw (1 increment = 5 µm on the diameter).

The setting system is protected and lubricated for life.

The precision of the mechanism guarantees repeatable accuracy.

The diameter adjusting screw is located on the side of the block to offer easy access.

Fine boring block through coolant, towards the cutting edge.

Suitable fine boring insert holders A72460, A72560 or A72660 have to be ordered separately: they are the same as on radial type fine boring heads, see page 447.

Assembling and setting procedures, see Instructions page.

Features

Graflex® boring blocks, for OD-overturning or back-boring

This block has a female Graflex® front connection size G5. Any Graflex® boring head, special tool or standard Graflex® module size G5 can be mounted onto the Bridge bars, e.g. the drawing showing set-ups for OD-overturning or back-boring using two Graflex® boring blocks fitted with a Graflex® fine boring head A78050 with insert holder (e.g. A72550 for OD-turning) a OD-turning insert holder (e.g. A789X30CC0690) and a Graflex® counterweight (e.g. Part No. BM050W78050).

Two positions of the Graflex® module are possible on the block, as it has 2x2 ball nose screw positions, and two tenon notches placed at 180°.

Block and boring head through coolant, towards the cutting edge.

Assembling and setting procedures, see Instructions pages.

Note: These new boring blocks can also be fitted onto the previous type of Bridge bars

These new boring blocks (Part No. A731S 400, A731S 500, A731S 600, A731S 40128) can also be fitted onto the previous type of Bridge bars (Part No. A731 0_0 -without S-).

Assembling and max. RPM instructions of the previous type of Bridge bars being valid. In order to keep balance, do not mix new and previous blocks on the same Bridge bar.

Advice for 'through coolant' accessories selection

Roughing (Bridge bar with 2 rough boring blocks):

For directable coolant supply onto both cutting edges, use 2 coolant pipe connectors (Part No. AU731S00700), to be mounted onto the Bridge Bar, and 2 directable coolant supply nozzle sets (Part No. AU731S40700), to be mounted onto each rough boring block.

For normal through coolant from the block's channel, use 2 coolant pipe connectors (Part No. AU731S00700), to be mounted onto the Bridge Bar.

Fine boring (Bridge bar with 1 fine boring block & 1 counterweight):

Use 1 coolant pipe connector (Part No. AU731S00700), to be mounted onto the Bridge Bar in order to connect the fine boring block. As the fine boring block originally features a coolant supply nozzles, directable coolant supply is directly obtained.

OD-overturning (e.g. Bridge bar with 2 Graflex® boring blocks equipped with one fine boring head and one counterweight): Use 1 coolant pipe connector (Part No. AU731S00700), to be mounted onto the Bridge bar in order to connect the Graflex® boring block with fitted boring head. Graflex® boring block's central coolant channel will feed coolant into the fitted boring head.

Note: Allowable coolant pressure = 70 bars maximum.

Coolant pipe connector
(Part No. AU731S00700)

Directive coolant supply nozzle set
(Part No. AU731S40700)

Building Bridge bar boring assemblies:

A rough boring assembly up to \varnothing 655 mm requires: 1 Bridge bar (A731S 0_0) + 2 rough boring blocks (2x A731S 400) with 2 cartridges*.

Fig.1

A fine boring assembly up to \varnothing 655 mm requires: 1 Bridge bar (A731S 0_0) + 1 fine boring block (A731S 500) with 1 fine boring insert holder size 60** + 1 counterweight block (A731S 600).

Fig. 2

A rough boring assembly up to \varnothing 3205 mm requires: 1 Jumbo Bridge bar (A731S 00_) + 2 Bridge bars (A731S 0_0) + 2 rough boring blocks (2x A731S 400) with 2 cartridges*.

Fig. 3

A fine boring assembly up to \varnothing 3205 mm requires: 1 Jumbo Bridge bar (A731S 00_) + 2 Bridge bars (A731S 0_0) + 1 fine boring block (A731S 500) with 1 fine boring insert holder size 60** + 1 counterweight block (A731S 600).

Fig. 4

* Cartridges to be ordered separately.

** Insert holders to be ordered separately.

Building Bridge bar back-boring assemblies:

A fine back-boring assembly up to \varnothing 676 mm requires: 1 Bridge bar (A731S 0_0) + 2 Graflex® blocks (2x A731S 40128) + e.g. 1 fine boring head (A780 50) with 1 back boring insert holder size 50° + 1 counterweight (BM050W78050).

Determination of minimum access diameter (D min)

Balancing condition: $WF1 = WF2$

$$D_{min} = DC + 5 \cdot BCDP$$

BCDP = distance between insert's cutting edge and fitted boring head's A78050 body ($7,5 < BCDP < 18,5$).

The two extreme cases:

- Boring head A78050 set to capacity mini:
 $D_{min} = DCN - 2,5$
- Boring head A78050 set to capacity maxi:
 $D_{min} = DCX - 13,5$

Fig.1

A fine back-boring assembly up to \varnothing 3226 mm requires: 1 Jumbo Bridge bar (A731S 00_) + 2 Bridge bars (A731S 0_0) + e.g. 1 fine boring head (A780 50) with 1 back boring insert holder size 50° + 1 counterweight (BM050W78050).

Fig. 2

* Insert holders to be ordered separately.

3128-3226		2x A731S 060		

Recommended machining conditions

Best performances are obtained with through coolant (higher machining data, better surface finish, better chip evacuation).

Rough boring depends on the priorities: higher feed or larger chip removal use symmetrical setting of the cartridges (most common method, double feed compared to staggered setting), or staggered setting (double depth of cut).

In fine boring in steel, with good conditions, we recommend to use Cermet inserts, for high speeds and long life.

For detailed user instructions, please refer to the operating instructions supplied as part of the delivery content of the boring heads and with the Steadyliner® bars. These operating instructions can also be downloaded from www.secotools.com.

Troubleshooting

Please refer to troubleshooting advice, in rough boring chapter page 401, or fine boring chapter page 436.

Maximum speeds for Bridge bars

Due to the large sizes of Bridge bar boring heads, unsuitable RPM programming could cause unpredictable damage.

Below max. RPM are for present Bridge bar boring assemblies using present Bridge bar types (Part No. A731S 0_0) rough boring, fine boring and counterweight boring blocks (Part No. A731S_00) and Jumbo Bridge bar (Part No. A731 00_). For other assemblies, please contact your local Seco representative.

Note: when using present boring blocks (Part No. A731S 400, A731S 500, A731S 600, A731S 40128) onto previous type Bridge bars (Part No. A731 0_0 -without S-), the max RPM to consider are the ones recommended for the previous type Bridge Bars. To maintain balance, do not mix new and previous blocks on the same Bridge bar.

Head based on	Capacity DCN-DCX Ø mm (mm)	Max. RPM (RPM)	Implied max cutting speed v_c at min. Cap. (m/min)	Implied max cutting speed v_c at max. Cap. (m/min)
Bridge bar boring heads (with two boring blocks set symmetrically)				
A731S010	204 - 280	1600	1025	1407
A731S020	279 - 355	1150	1007	1282
A731S030	354 - 430	900	1000	1215
A731S040	429 - 505	750	1010	1189
A731S050	504 - 580	650	1029	1184
A731S060	579 - 655	550	1000	1131
Jumbo bridge bars (with two identical Bridge bars and boring blocks set symmetrically)				
A731S 001	654-1105	170	349	590
A731S 002	1104-1630	100	346	512
A731S 003	1629-2155	70	358	473
A731S 004	2154-2680	50	338	420
A731S 005	2679-3205	40	336	402

Note: The maximum speeds are related to the boring head's mechanical design and balancing quality. Speeds inside these limits have to be chosen in regard to the other machining conditions, e.g. workpiece material, cutting edge (insert), tooling length, machine spindle.

Custom made boring solutions

Seco-EPB has a strong experience in the design of custom made solutions for boring operations:

- Steadyline® vibration damping rough and fine boring solutions,
- Multi-edge boring bars,
- Special extensions with guiding pads, for long overhang operations,
- Combined bars for drilling, boring, chamfering, reaming, threading operations...

Please contact your local Seco representatives for more information.

A selection of inserts for boring

This is a selection of inserts from the total Seco range, which are particularly suitable for boring. The selected insert sizes are those suitable for the range of boring heads.

Inserts for rough boring have high toughness to guarantee high metal removal and positive geometries to minimise spindle torque requirement. Inserts for fine boring have positive geometries and sharp edge wear resistant grades for accurate control of the bore tolerance, geometry and surface finish.

CVD coated grades recommended for boring

	TP1501	<p>Duratonic® technology coated grade. Highly heat and wear resistant grade extremely well suited for productive general turning of steels and a useful backup in other material groups.</p> <p>Ti(C,N) + Al₂O₃ + ...</p>
	TP2501	<p>Duratonic® technology coated grade. Designed with high wear resistance and edge strength applicable in a wide range of turning applications in steels as well as many stainless steels and cast irons.</p> <p>Ti(C,N) + Al₂O₃ + ...</p>
	TP3501	<p>TP3501 is intended for boring operations where the primary demand is toughness and reliability in machining steels and stainless steels.</p> <p>Ti(C,N) + Al₂O₃ DURATOMIC®</p>
	TP200	<p>TP200 is a universal grade with high versatility. The grade is intended for a wide range of turning applications in both steel and stainless steel and is also a good choice for cast iron.</p> <p>Ti(C,N) + Al₂O₃ + TiN</p>
	TP40	<p>TP40 is the basic grade for turning in the P40 range. Very tough grade for demanding operations on steel castings and forging, and on all types of stainless steel.</p> <p>TiC/Ti(C,N) + TiN</p>
	TK0501	<p>Duratonic® technology coated grade. A extremely wear resistant optimized grade choice for machining of grey cast iron and easier ductile cast irons.</p> <p>Ti(C,N) + Al₂O₃ + Used Edge Detection (Chrome)</p>
	TK1501	<p>Duratonic® technology coated grade. A highly wear resistant grade for cast irons in general as well as in steels. The grade is particularly capable in machining of ductile (nodular) cast irons also in more demanding setups and interrupted cuts.</p> <p>Ti(C,N) + Al₂O₃ + Used Edge Detection (Chrome)</p>
	TM4000	<p>TM4000 is intended for machining of stainless steel. The wear resistance together with the superior edge toughness make the grade the first choice in stainless steel applications.</p> <p>Ti(C,N) + Al₂O₃ DURATOMIC®</p>
	TH1500	<p>DURATOMIC® technology coated grade. An extremely hard super micrograin grade intended for machining of partly hardened steels and provide an alternative for cast iron finishing.</p> <p>Ti(C,N) + Al₂O₃</p>
	25 (EPB)	<p>Universal grade.</p> <p>The grade is intended for a wide range of boring applications in steel, stainless steel and cast iron.</p> <p>Good combination of wear resistance and toughness.</p> <p>Ti (C, N) + Al₂O₃.</p>

PVD coated grades recommended for boring

	TS2000	Hard micrograin principally intended for finishing operations in superalloys and titanium alloys. Also performs well in finishing operations on stainless steel. (Ti,Al)N + TiN
	CP500 & 26 (EPB)	A very tough micrograin intended for finishing and medium roughing of stainless steel. Can handle intermittent cutting operations very well. CP500 is also an alternative for aluminium alloys. (Ti,Al)N + TiN
	TH1000	Very hard supermicrograin grade intended for partly hardened steel components as well as generally workpiece materials such as superalloys and due to remarkable edge toughness it also provides high performance in interrupted cuts and hard-surface removal.

Uncoated grades recommended for boring

	KX & 03 (EPB)	Micrograin intended for machining aluminum and other non-ferrous materials.
	HX	Universal uncoated grade intended for machining of cast iron and hardened steels useful also in non-ferrous materials.

Cermet recommended for boring

	TP1020	Cermet with very high wear resistance intended for highest surface finish requirements with predictability and control in steel and stainless steel.
	TP1030	PVD-coated Cermet with very high wear resistance intended for high surface finish and productivity requirements with predictability in steel and stainless steel mainly. Ti-Al-Si-N nanolaminate coating.
	51 (EPB)	Cermet with very high wear resistance. Intended for finishing operations on steels, in which strict demands are made on surface finish.

CBN and PCD grades recommended for boring

	CBN010	<p>Format: Solid, full-face brazed layer and brazed tips (single and double sided).</p> <p>Composition: 50% CBN content grade with an average grain size of 2 μm and a TiC ceramic binder.</p> <p>Coating: No coating.</p>
	CBN10 & 81 (EPB)	<p>CBN, Cubic boron nitride grade, for light continuous to moderate interrupted cuts. Intended for fine boring in hardened steel and in superalloys.</p>
	CBN060K	<p>Solid, brazed tips (single and double sided) or sintered layer First choice for continuous to moderate interrupted cuts in hardened steel ($a_p < 0,5 \text{ mm}$). New (Ti,Si,Al)N PVD coating developed for high speed machining. New unique superalloy binder.</p>
	CBN200	<p>CBN, Cubic boron nitride grade, for finishing of pearlitic cast iron, and sintered iron.</p>
	PCD20 & 91 (EPB)	<p>PCD, polycrystalline diamond, for boring in aluminium and Al-alloys, copper, brass, bronze and synthetic materials.</p>

WARNING:

When using CN.. inserts it is important to use the recommended inserts and cutting data. Using other inserts and incorrect cutting data could result in high cutting stresses and machine/workpiece damage.

Inserts, recommended for fine boring, with cutting data

All cutting data are start values

Insert locking keys and screws of all boring insert holders, tools and cartridges

Specific clamp spare parts for CN.. inserts are shown in the CN.. type insert holders product page. Insert clamp spare parts for insert holders EPB 610 are shown in the insert holders for heads EPB 610 page 408.

Reminder: Spare parts are part of the original delivery content of insert holders, tools or cartridges.

Accessories are not included in the delivery content, to be ordered separately.

Suitable holders for boring heads

The EPB boring heads feature Graflex®, Seco-Capto™, GL or BA machine side connection

The boring heads can be used on any machine type, using the suitable Graflex® adapter, Seco-Capto™ adapter or Steadyliner® vibration boring/turning bar.

Steadyliner® vibration damping for boring operations

Boring heads with GL or BA machine side connections are designed to be mounted on Steadyliner® boring/turning bars with HSK-T/A and Seco-Capto™ machine side connections. This allows to perform rough and fine boring operations with 6xD, 8xD and 10xD projections, in very stable conditions.

Modular Graflex® and Seco-Capto™ boring bars

All bore lengths up to 6xD can be reached by selecting the required Graflex® intermediates, e.g. the extra-long ones with extension section in carbide. Highest assembly rigidity is obtained by selecting the longest and widest arbor possible, then completing with smaller intermediates. The Graflex® and Seco-Capto™ connections guarantees a unique orientation of the boring heads, achieving a cutting edge orientation according to ISO.

The Graflex® modules are designed to be clamped together by the side.

For boring heads with GL machine side connection for Steadyliner®, select the shortest Steadyliner® bar from the TOOLING SYSTEMS catalogue. These bar exist with HSK-T/A and Seco-Capto™ machine side connection. Other spindle types can be equipped, using the shortest Seco-Capto™ adapters.

For classic boring heads (steel), select the classic Graflex® and Seco-Capto™ arbors and intermediates from the TOOLING SYSTEMS catalogue. For Bridge bars, see Graflex® adapters and direct holders page 463.

Note: Jumbo Bridge bars are designed to be held on milling cutter holders or to be fitted directly on a machine's spindle front.

Locking advice for Graflex® classic connection shanks G. on boring heads (using a tenon with stop screw).

For boring, no need to tighten the tenon's stop screw, as the connection's self locking action is allowed.
For rough boring in heavy duty, we recommend to apply the 'high value' torques for the Graflex® ball nose screws.

See also the detailed 'Graflex® connection assembly procedure' in the TOOLING SYSTEMS catalogue.

Locking advice for Seco-Capto™ connection shanks C. on boring heads: No specific advice.
For boring heads, the general instructions are applicable, see below.

Tightening torques for Seco-Capto™ receivers connections with centre bolt clamping (Basic Holders, Intermediates)

Seco-Capto Size	Centre bolt tightening torque (Nm)	
C3	40-50	
C4	50-60	
C5	90-100	
C6	160-180	
C8	160-180	

Tightening torques for Seco-Capto™ receivers connections with segment clamping, actuated by cam shaft side locking (Flange Mounts)

Seco-Capto Size	Cam tightening torque (Nm)	
C3	35	
C4	50	
C5	70	
C6	90	
C8	130	

The Seco-Capto™ joint features a self-locking taper. Where the centre bolt system is used, unscrew the centre bolt until the bolt head makes contact with the tool holder, causing the bolt to force the taper joint apart. When using the cam shaft side clamping system, over tightening of the cam will force the taper joint apart.

Cemented carbide inserts and insert carriers

Cemented carbide inserts and cemented carbide insert carriers from Seco Tools are not included in the product range intended for the following requirements. Nevertheless Seco Tools can make the following declaration.

These products meet all requirements in RoHS (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment), WEEE (Waste Electrical & Electronic Equipment) and ELV (End of Life Vehicles) requirements.

Products do not contain mercury, lead, hexavalent chromium, cadmium, CFC, HCFC, flame retardants or solvents in concentrations that exceed specifications in the regulations.

Regrinding:

Wet or dry grinding can produce potentially hazardous dusts or mists that can irritate skin, eyes, nose, throat and result in lung damage or disease. To avoid injury use proper safety precautions and protective equipment.

Disposal:

Seco Tools will buy back used inserts and solid carbide tools for recycling. Inserts and solid carbide tools should be separated from other metal waste (steel, aluminium, copper etc).

All packing material is fully recyclable.

CBN and PCD inserts

Inserts from Seco Tools are not included in the product range intended for the following requirements. Nevertheless Seco Tools can make the following declaration.

This product meets all requirements in RoHS (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment), WEEE (Waste Electrical & Electronic Equipment) and ELV (End of Life Vehicles) requirements.

Products do not contain mercury, lead, hexavalent chromium, cadmium, CFC, HCFC, flame retardants or solvents in concentrations that exceed specifications in the regulations.

Regrinding:

Wet or dry grinding can produce potentially hazardous dusts or mists that can irritate skin, eyes, nose, throat and result in lung damage or disease. To avoid injury use proper safety precautions and protective equipment.

Disposal:

Seco Tools will buy back used CBN- or PCD-tipped inserts for recycling. Inserts should be separated from other metal waste (steel, aluminium, copper etc). Solid CBN-inserts may be discarded as landfill waste.

All packing material is fully recyclable.

Black oxide insert carriers

Insert carriers from Seco Tools are not included in the product range intended for the following requirements. Nevertheless Seco Tools can make the following declaration.

This product meets all requirements in RoHS (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment), WEEE (Waste Electrical & Electronic Equipment) and ELV (End of Life Vehicles) requirements.

Products do not contain mercury, lead, hexavalent chromium, cadmium, CFC, HCFC, flame retardants or solvents in concentrations that exceed specifications in the regulations.

Disposal:

Used insert carriers may be sent for recycling together with ordinary steel waste (swarf and discarded steel scrap) for recycling.

All packing material is fully recyclable.

Cermet inserts

Inserts from Seco Tools are not included in the product range intended for the following requirements. Nevertheless Seco Tools can make the following declaration.

This product meets all requirements in RoHS (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment), WEEE (Waste Electrical & Electronic Equipment) and ELV (End of Life Vehicles) requirements.

Cermet grade C15M inserts do contain nickel and will leach nickel when in contact with the skin. Amount of leaching is higher than specified in norm SS-EN 1811 Reference test method for release of nickel from products intended to come into direct and prolonged contact with the skin. These norms are intended for products that are in direct and prolonged contact with the skin and are therefore not directly applicable for cermet inserts. Persons with known allergic reactions to nickel are advised to wear protective gloves when handling cermet inserts.

Regrinding:

Wet or dry grinding can produce potentially hazardous dusts or mists that can irritate skin, eyes, nose, throat and result in lung damage or disease. To avoid injury use proper safety precautions and protective equipment.

Disposal:

Used inserts may be recycled. Inserts should be separated from other metal waste (steel, aluminium, copper, etc) including cemented carbide inserts.

All packing material is fully recyclable.

Nickel coated insert carriers

Insert carriers from Seco Tools are not included in the product range intended for the following requirements. Nevertheless Seco Tools can make the following declaration.

This product meets all requirements in RoHS (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment), WEEE (Waste Electrical & Electronic Equipment) and ELV (End of Life Vehicles) requirements.

Products do not contain mercury, lead, hexavalent chromium, cadmium, CFC, HCFC, flame retardants or solvents in concentrations that exceed specifications in the regulations.

Insert carriers do contain nickel and will leach nickel when in contact with the skin. Amount of leaching is not higher than norm SS-EN 1811 Reference test method for release of nickel from products intended to come into direct and prolonged contact with the skin.

These norms are intended for products that are in direct and prolonged contact with the skin and are therefore not directly applicable for insert carriers. Persons with known allergic reactions to nickel are advised to wear protective gloves when handling nickel coated insert carriers.

Disposal:

Used tools maybe sent for recycling together with ordinary steel waste (swarf and discarded steel scrap) for recycling.

All packing material is fully recyclable.

This work is published with the understanding that Seco Tools and its editors are supplying information aimed to present a general orientation and direction of metal cutting and related sciences. If professional services are required for specific applications, the assistance of an appropriate professional should be acquired.

The information is provided “as is”;

Seco Tools and its editors disclaim all representations and warranties, express or implied, of any kind, including, without limitations, any warranties of merchantability, fitness for a particular purpose, title, or non-infringement. In no event will Seco Tools or its editors be liable to any party for any direct, indirect, special or other consequential damages for any use of the information, even if Seco Tools or its editors are advised of the possibility of such damage.

The information provided herein is for reference purposes only. Actual prices, specifications, and product descriptions are finalised at the time of sale and may vary by location. The information provided herein is subject to change without prior notice.
